Eduard Gerlach GmbH

Georg J. G. 1868

General Catalogue 2014-15

A loyal partnership!

The foot professional's own exclusive brand:
GEHWOL FUSSKRAFT turns 53

Everything for the well-being of the feet.

Eduard Gerlach in front of his stand at the World Exhibition, Berlin 1889

The emergence of a quality brand

In 1868, the chemist Eduard Gerlach took over the colonial goods business of his father Ludwig in Lübbecke in Westphalia and extended it by adding a chemist's shop. This was the first chemist's shop in the district at that time, and was the basis with which Eduard Gerlach created a flourishing family business that has become internationally successful and a synonym for foot care, with the brand name GEHWOL. Eduard Gerlach was the pioneer of modern foot care – rightly so, as he developed the first industrially produced ointment to protect against and relieve foot pain.

His extensive powers of observation and his immense scientific knowledge enabled him to develop a highly effective product based on potash, special unsaturated fatty acids, mineral

lubricants and disinfectant essential oils, which he marketed in 1882 as “E. Gerlach’s preservative cream”. His branded product was soon selling like hot cakes. Eduard Gerlach was the first person to produce a foot care product in large quantities, thanks to the unique properties of his special cream and his industrial manufacturing method. The product was also good value and always of consistent quality. This was the first time that foot care had come within the reach of a wide circle of the population and created a premiss for the emergence of a general awareness of foot care. Eduard Gerlach received a number of international awards for his “preservative cream”.

From family business to industrial company

After the death of Eduard Gerlach in 1910, his son of the same name took over the family business and built it up into a versatile industrial concern that survived two world wars and all kinds of financial crises undamaged, thanks to consistent customer orientation and innovation. The traditional company has been led by Klaus Gerlach-Meinders and Jobst-Peter Gerlach-von Waldthausen since 1978 and obtained sales of nearly 44 million Euros.

GEHWOL FUSSKRAFT
folding cartons from 1961
to the present day

Our traditionally close connection to the industry is extremely helpful in the use of previous and existing synergies from technology and product development.

This close relationship has existed since 1966, when the concern GERLACH TECHNIK came into being and has stood our partners in foot care – and of course our customers – in good stead. The same virtues that have made the company great will lead it on into the future. Trust and openness, but also pride in what has been achieved and of course the pleasure of innovation. Just as it has been for more than 145 years.

Close connection to the industry

There are many reasons for the company's continuing success. One reason is of course the highly motivated staff. Another important pillar is the loyalty of Eduard Gerlach GmbH to the industry. In 1961 this loyalty led to a range designed exclusively for the needs of the podiatrist: GEHWOL FUSSKRAFT.

Success and tradition

The two umbrella brands GEHWOL and GERLACH TECHNIK from Eduard Gerlach GmbH represent "yes" for quality, innovation, experience, progress and partnership.

**We're gladly
there for you**

The catalogue is only part of our support

Would you like to set up your practice, or are you interested in the newest technology? Are you looking for tips and information about the newest foot care products? Our catalogue keeps you always up to date and comprehensively informed.

Profit from experience and know-how

Our partners and consultants are leading medical technology manufacturers and foot care specialists. It's your guarantee for a high quality, exclusive and extensive programme of devices and instruments, furnishings and of course, care products. For optimal use in the practice.

Use our partnership

Extensive service is only completed by good advice. We plan the set-up or modernisation of your practice with you, instruct you and your employees in device operation, and look after the maintenance of your technical equipment.

Do you have further questions?

We always have an open ear for you and will gladly advise and support you. You can call us at any time or speak with one of our field service workers near you.

The GERLACH Service Team

checks, maintains and repairs GERLACH foot care devices and ensures that you receive a flawless loaner unit.

Everything for the well-being of the feet, everything for the good of the specialist trade.

- GEHWOL FUSSKRAFT, the product range for foot specialists, is available exclusively to foot care professionals.
- The distribution of the other GEHWOL products is reserved solely for the specialist trade (foot care professionals, pharmacies and specialised drugstores).
- They are not distributed via price-distorting commercial routes.
- Your sales are supported by advertising measures such as advertisements in public magazines and with attractive advertising materials for you!

Profit from this exclusive partnership.

Avocado

Jojoba

Mountain Pine

Lavender

Mint

Rosemary

Algae

Aloe Vera

Cream Bases

Eudermic, protective, and cleansing oil-in-water-emulsions, which are easily absorbed by the skin.

Avocado Oil The oil is rich with active ingredients, especially mild and smoothens the skin. It is quickly absorbed by the skin and permeates well, especially with dry and scaly skin.

Jojoba Oil Skin-caring oil. Produces a silky and soft skin sensation, is quickly absorbed by the skin, and maintains the elasticity and smoothness of the skin.

Lanolin A substance similar to dermafat with excellent caring properties, contains provitamin D.

Med. Special Soaps Osmotically active against the formation of blisters. Strengthens the skin and maintains its elasticity. Normalises perspiration.

Natural Emulsions Skin-smoothing and elasticity of the skin. Prevent callus formation and cracks on the skin. They are used as basis for most GEHWOL preparations.

Rubuckthorn Oil Has a high amount of unsaturated fatty acids and vitamins. It has a caring and regenerating effect on the skin and a general anti-inflammatory effect.

Shea Butter Lipid component with an especially high share of saponifiable components to care for the skin. Makes the skin silky and elastic, locks moisture in the epidermis.

Heat Treated Oil Vitamin-rich oil, which smoothes and strengthens nails.

Natural Essential Oils

Moussier Oil Revitalising effect with a disinfecting and deodorising effect.

Yucca Oil Has a strong antiseptic, refreshing, stimulating and healing effect.

Yucca Oil Increases activity, is antiseptic, promotes healing and healing.

Yucca Oil Has a soothing effect, promotes healing and skin comfort. Disinfecting.

Mint Oil Cooling and refreshing effect, antimicrobial and antipruritic. Antispasmodic and tonicising.

Rosemary Oil Bactericidal, revitalising, increases well-being, activates and promotes circulation.

Thyme Oil Strong disinfecting effect, increases activity.

GEHWOL Active Ingredients

Algae Extracts Promote circulation of the skin, vitalise it and prevent wrinkles. Positively influences the moisture balance of the skin, calluses become smoother.

Allantoin An ingredient of the horse chestnut, promotes healing.

Aloe vera gel Aloe vera is a medicinal plant which has been used for centuries. It contains numerous ingredients such as vitamins and minerals which account for the gel's moisturising and anti-inflammatory effects.

Bamboo powder Finely ground powder from the inside of bamboo. Gently removes dead skin scales.

Oat

Honey

Ginger

Chamomile

Camphor

Manuca

Pepper

Tapioca

Ceramides Mixture of ceramides and phytosphingosine: natural skin lipid concentrate for restoring the protective skin barrier function. Even reaches the deeper layers of the skin.

Farnesol Known as a natural deodorant and well tolerated active ingredient, prevents the development of foot odour through bacteriostatic action.

Oat Extract The standardised extract contains anti-irritative avenanthramides that soothe the skin. Together with other ingredients, they improve skin elasticity and reduce irritation.

Hamamelis Extract Strengthens blood vessels, has a styptic effect and promotes granulation.

Honey Extract Regulates the moisture balance of the skin and soothes the skin.

Hyaluronic acid in a special, deep acting molecular size can be absorbed by the skin, supporting skin regeneration and reinforcing the skin's own defenses.

Ginger Extract Stimulates the thermal receptors. Provides warmth for the feet.

Chamomile-based ingredients Such as *bisabolene* promote healing, help to prevent inflammation and have a disinfectant effect. Excellent skin tolerance.

Camphor is absorbed excellently by the skin in combination with vegetable oils, promotes circulation and metabolism.

Manuca Concentrate The concentrate from the oil of the Manuka shrub contains high concentrations of the components which are especially effective in fighting foot odour. It has a broad spectrum effect against bacteria and fungi and is therefore particularly suitable for foot hygiene.

Menthol A component of peppermint oil. Has a cooling, refreshing, and deodorising, antipruritic effect.

Pantothol Provitamin B₅, with distinct promotion of the healing process. Accelerates growth.

Pepper Extract Stimulate the thermoreceptors of the skin and thus cause a warm sensation.

Mollusk-Pearl powder is a finely ground powder from the insides of seashells. It gently removes dead skin cells.

Tapioca starch is obtained from the Cassava (manioc) root. Tapioca starch particles smooth the skin and act as a barrier in the exchange of moisture between the skin and the environment.

Urea (carbamide) Due to its special skin-caring properties, it has been used with great success in medical and cosmetic preparations. This highly compatible substance, which is produced by the body itself, has a bactericidal, antipruritic effect and smoothens callus. The moisture balance of the skin is optimally regulated.

Vitamin E Acetate Protects the skin against premature aging.

Vitamin E Nicotinate Promotes circulation of the skin and thus warms it.

Zinc Oxide Is a well-tried active ingredient for the care of sensitive skin, with antimicrobial, slightly styptic properties and a skin protecting effect. Through the special activation method used, the action against many skin germs, that decompose perspiration, could vastly be improved.

GEHWOL FUSSKRAFT Soft Feet
the new, young feel-good and care series
exclusively for foot care specialists.

GEHWOL FUSSKRAFT® Soft Feet Cream

Milk & honey for well cared feet and legs.

GEHWOL FUSSKRAFT Soft Feet Cream contains vitamin-rich avocado oil and other valuable lipids in a gently caring base. A special deep-acting hyaluron is absorbed by the skin, supporting skin regeneration and strengthening the skin's own defences.

In combination with urea, hyaluron also binds moisture in deeper skin layers and protects against callus formation.

Milk peptides and honey extract render the skin noticeably more supple and visibly smoother.

GEHWOL FUSSKRAFT Soft Feet Cream is a moisturising foot and leg care product which is easily absorbed, leaving behind the feeling of silky soft skin. The pleasant scent refreshes and lends the security of well cared for feet. **Protects against foot fungus.**

Do not store over 30 °C!

Dermatologically tested.
Also suitable for diabetics.

	Order No.	Packaging language
125 ml tube	11 12 407	GB/F; NL/F D/I; DK/N
500 ml can with dispenser see page 50	11 12 411	GB/F

GEHWOL FUSSKRAFT® Soft Feet Scrub

Bamboo & jojoba for well cared feet and legs.

GEHWOL FUSSKRAFT Soft Feet Scrub gently and thoroughly removes dead skin cells, renewing and smoothing the skin surface. Natural bamboo granulate and jojoba wax support a gentle massage and activate skin circulation. Sugar crystals simplify rapid detachment of loose dead skin cells. Avocado oil and honey extract supply the skin with valuable care substances, while vitamin E protects it and prevents premature skin aging.

The skin has better circulation and is prepared for subsequent care e.g. with GEHWOL FUSSKRAFT Soft Feet Cream, making it easier for valuable active ingredients to be absorbed.

It's easiest to use the scrub in the shower.

Moisten the skin thoroughly; apply the scrub and massage it in. The sugar crystals detach the coarser dead skin cells, while the bamboo granulate performs fine smoothing. After the massage, rinse off the remaining scrub bodies together with the dissolved dead skin cells. GEHWOL FUSSKRAFT Soft Feet Cream ideally rounds out complete care for your feet and legs.

Dermatologically tested.
Also suitable for diabetics.

GEHWOL **FUSSKRAFT® Soft Feet** Lotion

Water lily & silk for well cared legs and feet.

GEHWOL FUSSKRAFT Soft Feet Lotion refreshes and nourishes with select active substances. Water lily calms and tightens, silk extract smooths the skin. A specially processed hyaluron is able to penetrate into deeper skin layers to store moisture there.

Soothing for tired, heavy legs – supported by red algae extract.

Avocado oil and phytosqualane counteract dry, coarse, scaly skin and reduce moisture loss.

The lotion is easily spread and rapidly absorbed. For the experience of light, silky soft nourished legs and feet.

Do not store above 30 °C!

Dermatologically tested.
Also suitable for diabetics.

Solely for professional foot care:
GEHWOL FUSSKRAFT – the right solution
for every foot skin problem.

GEHWOL FUSSKRAFT® Hydrolipid-Lotion

DRY SKIN

Intensive care, sustained moisture retention.

GEHWOL FUSSKRAFT Hydrolipid-Lotion is an easily distributed lotion for the daily care of dry skin on the feet and legs. It is quickly absorbed and compensates for a lack of lipids and moisture. The natural protective function of the skin is rebalanced. The active ingredients of urea and glycerine bind moisture in the deeper layers of the skin, hard skin becomes smooth and excess new skin formation is reduced. Avocado oil and jojoba oil replenish the lipids missing from dry skin. Ceramides are an important component of the skin's own protective function. They strengthen the barrier layer and protect the skin from drying out. Excessive scaling of the skin is reduced. The daily use of GEHWOL FUSSKRAFT Hydrolipid-Lotion helps prevent foot odours and fungal infections.

**Unscented. Dermatologically tested.
Also suitable for diabetics.**

GEHWOL FUSSKRAFT® BLUE

DRY ROUGH SKIN

Moisturising, naturally fresh.

GEHWOL FUSSKRAFT BLUE contains tried and tested effective ingredients for the prevention of foot odour, helps to prevent infections and itching between the toes. Natural caring oils such as lanolin are combined with moisturising aloe vera and urea to provide essential care for dry, rough skin on the feet, helping to restore the skin's elasticity, suppleness and smoothness. The natural essential oils of rosemary, mountain pine and lavender, invigorating camphor and cooling menthol contained in GEHWOL FUSSKRAFT BLUE relieve sore, aching feet immediately. Strengthens and revitalises the feet.

**Dermatologically tested.
Also suitable for diabetics.**

GEHWOL FUSSKRAFT® GREEN

NORMAL SKIN

Helps prevent foot odour – naturally fresh.

GEHWOL FUSSKRAFT GREEN contains the active substance complex Deozinc in a rapidly absorbed, nourishing cream base with shea butter, jojoba oil and aloe vera for long lasting protection against foot odour.

Sweating is normalised. The feet become fresh, odourless, smooth and silky.

Proven disinfecting active substances help to prevent infections, itching and blisters between the toes. Natural volatile oils, enlivening camphor and cooling menthol soothe burning and aching feet.

Dermatologically tested.
Also suitable for diabetics.

GEHWOL FUSSKRAFT® MINT

Cooling foot balm – mint fresh – absorbed rapidly.

GEHWOL FUSSKRAFT MINT makes your feet fresh and fit, before or after an active day.

It combines the revitalising icy freshness of a cooling mint lotion composed of an Asian medicinal plant oil with the gentle caring effect of a balm that is immediately absorbed.

Natural menthol, essential oils from rosemary, mountain pine and avender refresh and strengthen tired and aching feet instantly.

GEHWOL FUSSKRAFT MINT provides long-lasting protection against foot odour. Well-tried antiseptics help to prevent infections and itching between the toes.

Thinly spread the cream on your feet and legs and gently rub in. It is quickly absorbed, non-greasing, refreshes and gives you the feeling of having clean and supple feet.

GEHWOL FUSSKRAFT® RED

DRY ROUGH SKIN

For cold feet – warming.

GEHWOL FUSSKRAFT RED is a warming balm for dry skin, which gives relief for tired, strained and sore feet.

Revitalising camphor, extracts from paprika and ginger, as well as essential oils from rosemary and mountain pine, stimulate circulation and give pleasant warmth. Hint: You can intensify the warming effect if you treat your feet with a GEHWOL FUSSKRAFT Warming Bath Concentrate beforehand.

Skin-friendly concentrated emollients revitalise dry and brittle skin, making it soft and smooth again. Proven antiseptics prevent foot odour, infections and itching between the toes. Daily hygiene with GEHWOL FUSSKRAFT RED thoroughly warms the feet, maintains healthy skin and makes it smooth.

GEHWOL FUSSKRAFT® LEG VITALITY

**Vitalizes. Smooths the skin. Non-greasy.
Refreshes tired legs.**

GEHWOL FUSSKRAFT Leg Vitality is a balm for the special daily care of legs and feet.

It is quickly absorbed, pleasantly refreshing and makes your skin beautiful. A slight massage with GEHWOL FUSSKRAFT Leg Vitality and the ingredients are immediately absorbed by the skin and have a soothing effect on tired and heavy legs. Precious avocado oil, algae extracts and vitamin E provide the special skin-friendly properties of GEHWOL FUSSKRAFT Leg Vitality. Problem zones with dry and scaly skin are prevented; the moisture balance of the skin is considerably improved.

Allantoin and the chamomile component bisabolol support the caring properties and strengthen the mildly deodorising effect of the herbal agents.

Hamamelis – an extract from the Virginian witch hazel bush – soothes irritation and prevents wrinkles.

GEHWOL FUSSKRAFT® Warming Bath-Concentrate

**Foot bath concentrate with precious herbal extracts.
Vitalises and thoroughly warms feet and legs.**

GEHWOL FUSSKRAFT Warming Bath-Concentrate contains natural extracts from rosemary and pepper as well as a combination of vital vitamin E and a vitamin of the B-group.

All of the active ingredients are quickly absorbed by the skin and provide a spontaneous and long-lasting pleasant warm feeling of the feet. Stimulates the metabolism.

Prevents the loss of moisture and the elasticity of the skin is maintained. The footbath concentrate is economical to use and biodegradable.

GEHWOL FUSSKRAFT® Herbal Bath

**Softens calluses.
Effective against rough and brittle skin, foot perspiration and foot odour.**

The well-tried combination of active ingredients including essential oils from rosemary and lavender in a natural base helps to alleviate a lot of foot problems. Even persistent calluses, weals and corns are thoroughly softened.

The herbal bath is excellently suitable for the treatment of rough and brittle skin (fissures, cracks and reddening). It has intensive cleansing and long-lasting deodorising properties.

Excessive foot perspiration is normalised and unpleasant foot odour is eliminated. GEHWOL FUSSKRAFT Herbal Bath revitalises your feet. A long-lasting pleasant feeling of freshness remains after the bath. Regular use of the GEHWOL FUSSKRAFT Herbal Bath will give you healthy and supple feet.

For persistent foot and nail problems.
The particularly effective series of
preparations is well-tried for years.

GEHWOL med. Salve for cracked skin

A caring ointment for the treatment of heavily callused, brittle, dry and rough skin.

GEHWOL med Salve for cracked skin is based on a well-tried mixture of special soaps and selected skin-friendly oils. It contains an effective combination of natural essential oils, the skin-caring vitamin panthenol and the chamomile component bisabolol that helps to prevent inflammations. With regular use your skin will regain its natural elasticity and resistibility and will be protected. Cracked skin, reddening and the unpleasant side effects produced by that will be prevented in particular.

**Dermatologically tested.
Also suitable for diabetics.**

GEHWOL med. Lipidro Cream

For optimal care of dry and sensitive skin.

The high-quality ingredients compensate for a lack of lipids and moisture and naturally balance the protective properties of the skin. Urea absorbs water in deeper skin layers. Calluses are softened and excessive reformation is reduced. Seabuchthorn oil and avocado oil with a high amount of unsaturated fatty acids supply dry skin with lipids and thus prevents the loss of water through evaporation. This effect is supported by a special algae extract. Allantoin, an ingredient of the horse chestnut, promotes the regeneration of the skin. Farnesol has an antibacterial and deodorising effect. Daily usage of GEHWOL med Lipidro Cream gives you protection against foot odour and infections and helps to prevent inflammations.

**Unscented.

GEHWOL med. Antiperspirant

Cream lotion for sweat reduction.

GEHWOL med Antiperspirant cream lotion leads to drier, odourless feet with daily use. The skin is protected against sweat decomposing microorganisms, fungal infections and itching between the toes. Sweat formation is reduced and odour formation is prevented. Simultaneously, excessive dehydration and brittleness are prevented. GEHWOL med Antiperspirant cream lotion reduces sweat and protects against foot odour. Aloe vera, avocado oil and glycerine nourish the skin while aluminium chlorohydrate reduces sweat formation. Zinc ricinoleate removes odours and sodium PCA protects the skin against dehydration.

Dermatologically tested.

GEHWOL med. Callus Cream

Removes nuisance callus in 28 days.

Urea strengthened with glycerine and allantoin loosens the cell bond of the hard callus layers. The intensive care brings about immediate softening and a noticeable reduction of callus within a few days. Normal conditions are generally reached within 28 days. Lipids strengthen and protect. Silk extract provides moisture and smoothens the skin. Regular skin care with GEHWOL med Lipidro Cream is recommended to protect against new formation of excess callus.

Dermatologically tested. Also suitable for diabetics.

GEHWOL med. Deodorant foot cream

With Manuka extract for 24 hour freshness.

GEHWOL med Deodorant foot cream with its pleasant odour combines the highly concentrated active substance extract of Manuka oil with micronised zinc oxide to remove strong foot odour for at least 24 hours in a nourishing cream base with jojoba oil and aloe vera. The extract, which is being used in foot care for the first time, contains all active substances of the well-known Manuka oil and is particularly suitable for foot hygiene due to its excellent effects against bacteria and fungi. Zinc oxide in its highly effective micronised form is an active substance that is extremely well proven in the care of sensitive skin, with antimicrobial and skin protecting properties. Aloe vera has a bacteriostatic, anti-inflammatory, regenerating and oisturising effect. As a natural liquid wax, jojoba oil is rapidly absorbed by the skin. It contains valuable unsaturated fatty acids and supports the natural functions of the skin. Regular use of the mildly moisturising cream gives you odourless feet, softens your skin and protects against fungal infections.

The classic product series offers a complete spectrum of effective modern care products. For everyone, who wants to do something good for his or her feet and legs.

GEHWOL[®] Softening Balm

Care balm for silky soft feet and legs.

GEHWOL Softening Balm - the care balm with deep acting hyaluron and the active substances of milk and honey for silky soft nourished skin.

The cream of skin friendly lipids in combination with nourishing avocado oil contains a special hyaluron which is absorbed by the skin, supporting skin regeneration and strengthening the skin's defences. Proteins of milk and honey extract render the skin noticeably more supple and visibly smoother.

Skin moisture is intensively boosted. The combination of the active substances of hyaluron and urea binds moisture into the deeper skin layers and softens hard skin regions.

The result: silky smooth, well cared for skin on the feet and legs.

Do not store over 30 °C !

**Dermatologically tested.
Also suitable for diabetics.**

GEHWOL[®] Mother-of-Pearl Scrub

Caring scrub with Mother-of-Pearl powder for legs and feet.

GEHWOL Mother-of-Pearl Scrub acts with valuable Mother-of-Pearl powder, fine sugar crystals and massaging wax balls.

Nuisance dead skin cells are removed, the skin is gently massaged and hydrated.

Algae extract keeps the natural skin barrier intact with sea water which is rich in mineral substances. Jojoba oil renders the skin smooth and supple, bisabolol and panthenol soothe the skin and also protect against inflammations.

GEHWOL Leg Balm for dry or normal skin ideally completes the treatment.

GEHWOL[®] Leg Balm

Pleasantly soothing medicinal herb balm for legs and feet.

GEHWOL Leg Balm is a gentle, non-oily herbal balm specially for the care of the legs and feet.

Allantoin, an ingredient in horse chestnut, bisabolol, a constituent of chamomile, hamamelis extract, menthol and panthenol reduce irritation and have an astringent and soothing effect on skin discolouration and redness. The valuable active ingredients are rapidly absorbed by the skin. GEHWOL Leg Balm makes skin beautiful, smooth and supple when used regularly. Dry skin, skin blemishes, discolouration, infections of the foot and premature skin ageing are prevented. A light massage strengthens your veins, prevents leg ailments during pregnancy and affords a pleasant feeling of being fresh.

GEHWOL[®] Warming Balm

**For cold feet.
Moisturising care for dry and normal skin.**

Extracts of algae, pepper, ginger, essential oils of rosemary and lavender as well as invigorating camphor stimulate the circulation and dispense a pleasant feeling of warmth. Aloe vera, urea and glycerine help to improve skin moisture in a base of skin-friendly care products such as avocado oil, beeswax and lanolin. They help the skin to store and harness natural moisture. Cares for normal and dry skin, leaving it smooth and soft.

Proven antiseptics help to prevent foot odours, infections and itching between the toes. Daily care keeps the skin of the feet healthy and soft and imparts a pleasant warm feeling.

Tip: You can increase the warming effect by treating your feet to a hot GEHWOL Foot Bath beforehand.

**Dermatologically tested.
Also suitable for diabetics.**

GEHWOL[®] Refreshing Balm

**Cooling cream for fresh feet.
Cares and deodorises.**

Natural peppermint oil and menthol refresh tired, sore and strained feet and legs.

GEHWOL Refreshing Balm immediately revitalises, cools and deodorises your feet and gives you a long-lasting feeling of freshness.

Protective substances regulate the moisture of the skin and restore elasticity to hardened skin areas.

GEHWOL Refreshing Balm protects you from infections and itching between the toes, is quickly absorbed and is non-greasy. Refreshing foot and leg care.

**Dermatologically tested.
Also suitable for diabetics.**

GEHWOL®

Foot + Shoe Deodorant

For hygienic freshness.

GEHWOL Foot + Shoe Deodorant for daily foot care. Ideal for sports and on the go. Zinc ricinoleate prevents and removes sweat and odour on the feet and in the shoes. The pleasant scent provides confidence. Antimicrobial active substances protect against fungal infections in hotel rooms, baths, saunas and when trying on shoes. Also spray into footwear.

Dermatologically tested.

GEHWOL®

Caring Foot Spray

Refreshes, deodorises, protects and nourishes. Fresh feet all day long.

GEHWOL Caring Foot Spray refreshes, deodorises and protects effectively against fungal infections. Urea and allantoin provide the skin with needed moisture and prevent calluses. The skin remains smooth and nourished.

Dermatologically tested.

GEHWOL[®] caring FOOTDEO

Refreshing foot spray.
Deodorises, protects and cares.

GEHWOL caring FOOTDEO contains natural medicinal plant oils from rosemary and lavender, balanced in a combination of herbal extracts from chamomile and peppermint as well as with the skin vitamin panthenol. GEHWOL caring FOOTDEO revitalises and stimulates the circulation. It has a long-lasting refreshing and deodorising effect and provides long-lasting protection against foot odour.

The spray effectively disinfects and protects you from mucous infections of feet and nails. It prevents inflammation and softens hardened calluses. The pump spray can be used upside down as well.

Dermatologically tested.
Also suitable for diabetics.

GEHWOL[®] Foot Powder

Special disinfectant powder.
Keeps feet dry.

GEHWOL Foot Powder keeps your feet dry, smooth and odourless. The special powder with the disinfectant GEHWOL active ingredients prevents infections.

GEHWOL Foot Powder has a fresh and clean odour. We also recommend sprinkling GEHWOL Foot Powder in your socks.

GEHWOL® Bath Salt

**Revitalising rosemary bath.
Cleanses, refreshes and revives the skin.**

A bath with GEHWOL Bath Salt softly and thoroughly cleanses, stimulates the circulation, revitalises and strengthens the skin. The soothing substances are deeply absorbed into the pores and prevent excessive perspiration and foot odour. Applicable as footbath and complete bath. Regular usage protects against infections. During bathing a fine and discreet scent of rosemary is produced, which makes the water silky-soft. Brush massages in the water intensify the soothing effect.

GEHWOL® Foot Bath

**With balsamic herbal oils.
Alleviates aching feet, revitalises tired feet.**

GEHWOL Foot Bath helps aching, sore and sweaty feet. It revitalises tired feet and eliminates troublesome soreness. Calluses, weals and corns are softened. The skin is cleansed to the pores and remains resistant and smooth. GEHWOL Foot Bath deodorises over a long period of time. Natural essential oils from lavender, rosemary and thyme promote the circulation. The feet are thoroughly warmed and revitalised. Subsequently treating the feet with GEHWOL caring FOOTDEO or GEHWOL Balm will support the effect.

Dermatologically tested.

Is there an effective and excellent care for strained feet? Yes: since 1882. And there is a good reason for the track record of these products: experience and well-trying quality.

GEHWOL® FOOTCREAM

**For strained feet and highly stressed skin.
Prevents sores and blisters.**

Gerlach's GEHWOL FOOTCREAM prevents aching feet, sores, blisters, soreness and chafing. It helps to prevent inflammations and infections and brings the activity of the perspiratory glands back to a normal level. The cream eliminates foot odour and other side effects of excessive foot perspiration. GEHWOL FOOTCREAM strengthens the skin and makes it resistant. Protects amputation stumps and hands during strong strain. In addition, the foot cream offers protection against cold feet and frostbite. Gerlach's GEHWOL FOOTCREAM is known since 1882 and is constantly adjusted on the proven basis to the current scientific knowledge. Gerlach's GEHWOL FOOTCREAM has been successfully used a million times over to treat overstrained feet.

**Dermatologically tested.
Also suitable for diabetics.**

GEHWOL® EXTRA

**Universal foot cream with broad-spectrum efficacy.
For daily intensive care.**

GEHWOL EXTRA intensively cares and strengthens overstrained feet. The skin of the feet is deodorised and disinfected. GEHWOL EXTRA protects against sore feet, infections, foot odour, alluses, sores and blisters and makes dry and rough skin smooth. Natural GEHWOL EXTRA oils from eucalyptus, rosemary, lavender and thyme revitalise your feet and increase their performance. GEHWOL EXTRA stimulates the circulation and protects against cold and wet feet.

**Dermatologically tested.
Also suitable for diabetics.**

Effective nail care, fungicide preparations and special applications for special foot conditions – even for these problems GEHWOL preparations are the products of choice.

GEHWOL® Corn tincture

Active substance: salicylic acid (Ph. Eur.)

For external use against corns.
Solution for use on the skin.

GEHWOL® Fluid

**For the care and treatment of ingrown toenails,
calluses and corns.**

GEHWOL Fluid takes care of and beautifies your skin and nails.
It makes hard skin smooth.

GEHWOL Fluid is an essential aid while working with instruments
on ingrown toenails, calluses, corns and in the perionychium.
Due to its disinfecting properties, GEHWOL Fluid prevents inflammation
and soothes irritable skin.

GEHWOL[®] Nailcare

**For fragile finger- and toenails and to support the preparative treatment of nail mycosis.
Promotes nail growth.**

GEHWOL Nailcare contains a high amount of wheat germ oil with vitamin E and other builders. Furthermore, it contains active ingredients from the essential oil of chamomile in a solution with optimal momentum and spreading effects.

For the treatment of fragile finger- and toenails and to promote healthy growth. Rub in GEHWOL Nailcare on your nails and the surrounding skin areas every day.

GEHWOL[®] Nail Softener

**Prevents ingrown nails and strong cornification.
Gives nails and cuticles elasticity.**

GEHWOL Nail Softener quickly and carefully softens cornification. Problems created by ingrown toenails are minimised. The painful pressure of the nail on the nail bed is eliminated.

GEHWOL[®] Nail Compound

For beautifying, protecting and repairing your finger- and toenails.

GEHWOL Nail Compound is to be used to smoothen uneven nail surfaces, strengthen broken nails, fixating artificial nails and for the treatment of onychomycosis.

GEHWOL Nail Compound is strongly adhesive, durably resilient and gives the nails a beautiful and natural appearance. Nail polish may be used additionally. For application on skin and nails (see page 240).

GEHWOL® Nail repair Gel

GEHWOL Nail repair Gel with high- and medium viscosity is a polymerisation resin hardened by UV light which enables you to apply a highly elastic nail coating in a simple manner, matching the natural nail perfectly. For the treatment of damaged, brittle or torn toenails, for the reconstruction of diseased nails and for fixing clips. GEHWOL Nail repair Gel is thrifty in use. It can be applied with a thin tip of a tube onto the nail without using tension, and it is self-adhesive and does not require any fastening agents. GEHWOL Nail repair Gel only hardens under UVA light. Thanks to its antimycotic ingredients, GEHWOL Nail repair Gel protects against further fungal infection.

GEHWOL® Nail Repair Cleaner

Before using GEHWOL Nail Repair Gel, work on the nail which will be treated and then clean and degrease it with GEHWOL Nail Repair Cleaner.

The dispersion layer after the nail is completely built up is optimally removed with GEHWOL Nail Repair Cleaner.

It can also be used to clean unhardened GEHWOL Nail Repair Gel of instruments and out of paintbrushes.

GERLACH has comprehensive knowledge at their disposal, which can also be transferred over into other health care areas. The result: quality products that go beyond foot care.

GERLAVIT®

MOOR-VITAMIN-CREAM

For sensitive and dry skin.

Free from fragrances. Contains natural herbal oils and deep moor extracts.

GERLAVIT Moor Vitamin Cream is especially suitable for taking care of dry and sensitive skin.

Natural herbal oils from wheat germ, avocado and jojoba as well as substances from the deep moor take care of the skin and make it smooth and supple.

Panthenol and vitamin E work against the formation of wrinkles and premature ageing of the skin.

GERLAVIT Moor Vitamin Cream is quickly absorbed and creates a pleasant feeling of smooth and well-kept skin.

Dermatologically tested.

	Order No.	Packaging language
75 ml tube	21 10 805	GB/F

GERLASAN®

Hand Cream with urea

Moisturising, skin protecting, rapidly absorbing. For daily hand care.

Consists of a special combination of ingredients including aloe vera, jojoba oil, tapioca starch and urea for intensive care and protection of overstrained hands.

Inflammation-inhibiting bisabolol, panthenol to promote healing, and clotrimazole, which is effective against skin fungi, provide optimum protection.

The moisturising GERLASAN Hand Cream is easily distributed and rapidly absorbed, protecting and providing a pleasant skin sensation.

GERLASAN[®] **achselfrisch[®]**

Long-lasting deodorisation. Freshness for day and night.

The mild GERLASAN achselfrisch normalises perspiration and provides care with well-tried skin protecting substances.

The scent is clean and discreet.

GERLASAN achselfrisch does not leave any stains.

GERLASAN achselfrisch is an intensive and long-lasting effective deodorant with excellent skin compatibility.

A surprisingly efficient combination of skin-friendly deodorants prevents the spread of bacteria from decomposed perspiration in two ways:

- the spread of bacteria that decompose sweat is prevented
- enzymes that decompose sweat are reliably inactivated

GEHWOL FUSSKRAFT® Hydrolipid-Lotion

DRY SKIN

Intensive care, sustained moisture retention.

FUSSKRAFT® BLUE

DRY ROUGH SKIN

Moisturising, naturally fresh.

FUSSKRAFT® RED

DRY ROUGH SKIN

For cold feet – warming.

FUSSKRAFT® RED

NORMAL SKIN

For cold feet – warming.

FUSSKRAFT® Soft Feet Cream

Milk & honey for well cared feet and legs.

FUSSKRAFT® Soft Feet Lotion

Water lily & silk for well cared legs and feet.

FUSSKRAFT® LEG VITALITY

Vitalizes. Smooths the skin. Non-greasy.
Refreshes tired legs.

FUSSKRAFT® liquid

Cream lotion with lanolin and the well-tried GEHWOL active ingredients such as rosemary oil, mountain pine oil and camphor. An optimal massage preparation after foot care, soothing for feet and legs. It is particularly well absorbed by the skin.

GEHWOL FUSSKRAFT® Callus Softener with 25% urea

The liquid product is changed by means of a dispenser system into a fine-pore foam containing concentrated urea and lactic acid, without the use of propellants and is used for precise and rapid softening of hard skin. After just five minutes, the softened hard skin can be easily removed, which means treatment takes considerably less time. The foam produced remains stable on the skin and does not swell up. This means that there is no unintended softening of neighbouring skin areas. Antimicrobial. Unscented.

GEHWOL® Protective Plaster oval

Soft moleskin fabric relieves pressure on bunion and corn problem areas.

Medical Device.

Illustration shows actual size

GEHWOL® Sponge for Hard Skin

GEHWOL Sponge for Hard Skin with double action.

Coarse and fine pored mineral callus sponge.
The coarser, white side is for removing stubborn callus, warts and corns from the feet.
The finer, blue side is for the hands, ankles, knees etc.
Dead skin cells are removed – the skin becomes tender and soft.
Tip: A GEHWOL Foot Bath makes it easier to remove callus.

GEHWOL posters, sales aids and advertising media, the somewhat different series of care products from GERLACH. We offer you an abundance of constantly updated advertising and decoration materials, which do more than only serve your success of sales. The strong brand name GEHWOL qualifies you as a foot specialist and furthermore provides you with positive advertisement. Profit from the large-scale support you receive with GEHWOL on your side. And don't miss a real competitive advantage. Please discuss with our local representative, which advertising materials and decorations suit your business best. He or she will be glad to help and provide you with individual consultation.

GEHWOL posters are always a valuable finishing touch to your storefront or shop window. You always have the possibility of setting the right accents, be it seasonal or problem-oriented. Choose from the current offers the posters that best suit your needs. They can either be stood up or hung.

Working together.

Let us work together to improve what is most important to all of us: your customers.

They expect help in alleviating their foot problems and want to feel better in pleasant surroundings. Only when that is successful they will become key customers for whom regular foot care becomes just as much a matter of course as going to the hairdresser round the corner.

We can help by working together. You with your professional work on the feet. We with our foot care products to support your treatment, and technology that makes your professional work possible.

273 Index

The house of **GERLACH** has been a podiatry partner for 140 years, taking its stimulus from practical experience and developing a range designed to meet the requirements of the professional. The umbrella brands **GEHWOL** and **GERLACH TECHNIK** traditionally stand for pioneering work both in range of products and in practice equipment. Continuous efforts are made to improve working conditions in podiatry, backing innovation and comprehensive service.

It is our aim to stand as an adviser to interested parties, so it is important that our programme does not become confusing as a result of unnecessary duplication. When selecting instruments and equipment, experienced practitioners tend to decide on the **GERLACH** range. With their help, we have developed a practice-oriented, up-to-date range without any out of date or superfluous products, which meets all the requirements of modern medical and cosmetic foot care.

Until the 1960s, almost all instruments used in foot care were not motorised. The height of patient chairs could hardly be adjusted at all and the person treating the patient crouched over in front of the client in an unhealthy position. The use of apparatus in foot care began with slow running wave apparatus and thick heavy motorised hand pieces. Dust from grindings was an unsolved problem and hygiene in the medical sense was not pursued. Poorly lit work places damaged the eyes and endangered the foot being treated. In brief: it was an uncomfortable, laborious and even unhealthy business.

These days, podiatry has at its disposal innovative forward-looking technology. Ergonomically designed and beautifully shaped equipment makes the work easier, as well as safer and more pleasant for the customer and the podiatrist.

The house of **GERLACH** has significantly influenced this development and driven it forward. **GERLACH TECHNIK** has been making its name since 1966 with the development and promotion of apparatus, instruments and equipment.

The first **GERLACH** foot care device appeared on the market in 1969 with the micromotor hand piece and centrifugal clutch. The first foot care cabinet followed in 1970, with integrated dust suction – an important step on the way to preventative health care with the aid of foot care technology.

This was followed by the first foot care cabinet with integrated dust suction - an important step on the way to preventive health care using the foot care technology.

In the next few years, the micromotors became increasingly more effective, with less vibration and even higher revs. Better designed millers, burrs and grinders also reduced unpleasant vibrations. At the same time, hand pieces became lighter and slimmer.

The work was made even easier when, for example, **GERLACH** introduced its patented fitted fast tension device and simple clear view servicing in 1984. Devices for sucking up unhealthy dust from grinding perform effectively and quietly these days. Micromotor hand pieces with spray technology are available for fine work. A fine mist of spray binds the grinding dust and at the same time cools the working area. Drills and grinders at

Foot care device
back then and today

high revolutions are more pleasant and less painful for the patient and save time and are safer for the podiatrist.

Since 1993 modern two-in-one cabinets have offered the opportunity to choose between either suction or spray technology depending on the work to be carried out or the size of the burr. The smart appearance of the cabinets is bound up with comfort and functionality. GERLACH foot care cabinets keep modern technology ready to hand and accessible for pleasant working with short hand movements.

For more comfort, safety and health protection during foot care, patient chairs have been developed from an ergonomical point of view.

With their help, painful tension and back damage can be prevented. The height and inclination can be adjusted, and the leg and foot supports can be moved into the perfect position, whatever the work. The podiatrist works with a straight back, is less tired and is not forced to work in an uncomfortable position.

The correct work chair also contributes to maintaining good health. The Pending chair is the way forward here. The seat position is flexible so it automatically provides the correct position and perfect protective support for the vertebrae. The variable pulse rhythm also improves blood flow and strengthens the muscles.

Health protection is also part of the law on medical devices (MPG) which has stipulated the certification or labelling of medical devices since 1998.

Medical devices in the sense of the law are all devices and materials intended for use on humans to detect, prevent, monitor, treat or relieve diseases, injuries or disabilities. It is recommended that in the future, medical podiatry work, such as the treatment of corns, ingrown toenails, painful hard skin, etc., should make use of only CE-certificated medical products. That applies to equipment, chairs cabinets, hand instruments and burrs as well as sterilisers.

All the medical products in this GERLACH range have been labelled so that selecting safe products is easy. This takes into account the positive trend of increasingly recognising that podiatry is a medical activity.

It corresponds to our conception of ourselves as a partner podiatry supplier offering exceptional quality at a sensible price to performance ratio.

This catalogue is clearly divided into sections to make it easier to find what you are looking for. With the additional information provided, it should be able to give the reader proper recommendations and offer help in making decisions.

Comfort at the Highest Level

STERN PODIA
Treatment unit
LUNAR XB or XF with UV

Top notch foot care technology.

The treatment units LUNAR XB and LUNAR XF have a modular structure; that is, cabinet modules can be electively right or left mounted. The treatment units can be equipped with hanging tubes (LUNAR XF, see illustration to the right) or pull-out whips LUNAR XB, see the illustration below).

Base equipment

3-function syringe
 Electr. micromotor MCX (1,000 - 40,000 RPM) with needle valve,
 Hand piece Bien Air PM 1:1 Micro Series,
 Foot switch SL, continuously adjustable

Instrument carrier

The module arm can also be rotated via two axes. This allows optimal adjustments directly at the foot work area.

Operating panel with setting and display of pre-selected speed of the hand pieces (LED display).

Right/left rotation of the E-motor, time controlled, cyclic spray function, dustsuction, spray shutoff, pressure key for special function.

Also operation of the ARCADIA-X treatment chair.

The column stands on four swingable, easily running castors.

Additional cabinet modules

Additional cabinets for the LUNAR/ATLAS treatment units with various drawer divisions are available upon request.

Dimensions:

W: 79 cm, H: 92 cm/114 cm, D: 64 cm

EUROCLINIC treatment unit COMPACT TS

Modern, sophisticated design, technical innovation and high quality materials are the especially attractive features of this professional cabinet.

All functions are centrally accessible on a rotating instrument arm and controlled via a colour 4.3 inch touchscreen with a clear overview.

Easy to save and bring up with 3 storage options (memory) for personally selected speeds, as needed.

When using a MYA 2 chair, the chair can also be operated wirelessly via the touchscreen.

MARLAN work surface made from natural minerals and strong polyester resin; joint-free, hygienic, dirt resistant and therefore particularly easy to clean.

Freely selectable instrument drawers with different heights. Optional UV compartment.

Equipped with a comfortable, continuously adjustable multifunction foot switch for the micromotor, turbine and chip blower.

Base equipment:

- Brushless micromotor, speeds adjustable from 2,000 to 40,000 RPM, with Castellini hand piece for rotary instruments with a shaft Ø 2.35 mm
- Three-function syringe spray-water-air

Additional equipment:

- Suction unit for micromotor hand piece
- Turbine module, including angled turbine with lamp, max. speed 350,000 RPM for rotary FG instruments with a shaft Ø 1.6 mm
- Quiet running compressor JUN AIR 2 x 50 ltr/min
- Lamp holder for magnifying lamp

Dimensions:

W: 85 cm, H: 80 cm, D: 54 cm

Unit colour white.

Order No. MD

GERLACH Foot Care Cabinet JUPITER

User-friendly, easily cleaned key pad, 25° incline

Ergonomically favourable position of the hand piece holder, directly at the operating pad

Especially long lived quality hinges

Dust-protected full pull-outs with gentle pull-in

Flattened edges

UV compartment for low pathogen instrument storage directly at the work station

Continuous grip rails in the drawer area

High shine, insensitive front in POLYGLOSS SR

GERLACH foot care cabinet JUPITER Duomatic S 2 with UV compartment

90 cm wide with spray and suction technology.

Easy-to-clean control panel for a particularly clear view and simple operation inclined backwards at 25°.

With wireless radio foot switch.

Maintenance-free, electronically commuted electric micromotor hand piece:

Suction hand piece – 116 g

Spray hand piece – 170 g

With automatic tension clip for fast and easy burr change.

RPM:

Spray hand piece: 2,200 – 42,000 rpm

Suction hand piece: 5,000 – 42,000 rpm

Light spray hand piece with integrated spray control. Suction hand piece with all round suction.

Hand piece rev counter can be stored separately. Spray quantity and suction performance can be individually adjusted. Each hand piece has 3 speeds and can be programmed in combination with the spray/suction performance if required. Right/left running.

Digital display of the desired rotation speed, LED display of the selected suction performance and spray quantity.

Spray device: very quiet-running compressor, 500 ml spray tank. Precision electronic spray quantity adjustment.

Suction device: MIELE dust suction with AIR CLEAN exhaust filter. Intensive Clean dust bag with 4 l fill volume. Electronically controlled suction performance of 140 – 220 l/min.

Foot care cabinet: brilliantly shiny POLYGLOSS SR-coated fronts. Very high quality and extremely long lived, joint-free and hygienic CORIAN work surface which folds out and is made from acrylic-bound mineral materials.

Integrated UV compartment can be fully pulled out for low-germ storage of instruments directly at the place of treatment.

3 easy-running full pull-out drawers, roller guides GRASS NOVA PRO CLASSIC with Airmatic dampening system.

Scope of delivery:

3 trays, 3 grinder boxes, hand piece holder, 1 hand piece service pack, 1 hose holder, 1 drawer inset, 4 dust bags, 1,000 ml GERLACH spray solution, 1,000 ml AquaSpray

Dimensions and weight:

W: 90 cm (without extensions),

STERN PODIA treatment chair ARCADIA-X

The top product from the house STERN PODIA for modern foot care practices. The foot care treatment chair with its sophisticated design has electromechanical height, seat incline and back rest adjustments.

The arm rests move synchronously with the back rest to a horizontal lying position and can be rotated by 270°. When the patient is lying face down, they can easily place their arms in a fatigue-free position. Easily accessible on the front of the chair: locking brakes for the chair, which rotates by 340°.

Also equipped with two safety stop switches on both sides of the seat.

The leg rests can be pulled out, fold down and swing out by 35°. This is ideal to allow older and smaller patients to get in.

Joint-free, easily cleaned, optimally formed seat cushion and back cushion areas complete the optically attractive appearance of this chair.

Width:	65 cm
Lying surface:	185 cm max.
Height seat surface:	52–87 cm
foot support:	134 cm max.
Seat depth:	52 cm
Length of leg support:	31 cm min. 51 cm max.
Chairs rotating ability:	340°
Max. load bearing:	220 kg
Weight:	120 kg

EUROCLINIC treatment chair MYA 2

Design and advanced technology make this professional foot care chair stand out.

Multi-zone foam and a high quality cushion offer patients extreme comfort. Two soft, oval cushions at the upper and lower end of the extended back rest also serve as head and lordosis supports. The folding arm rests are padded on both sides and therefore support the arms comfortably even while lying down.

Two motors control the seat height and incline synchronously with the back rest (Trendelenburg position).

The back rest can be manually adjusted and moved to a 180° lying position.

The chair can be rotated by 175° in both directions, offering the treating person an optimal work area with its swinging, divided leg rests.

Using the foot switch or by remote control, the chair can be moved to any desired position. A home position (patient entry and exit) as well as two freely storable treatment positions also simplify the controls.

If equipped with a remote foot switch, the chair can also be controlled using the control pad of the "Compact TS" treatment unit (see page 93).

Width:	80 cm
Height seat surface:	54 cm min. 89 cm max.

CONCEPT F3 Ergonomics in their most beautiful form

The CONCEPT F 3 introduces a new generation of treatment chairs. Maximum freedom of movement due to innovative drive technology, the highest levels of seating comfort for patients as well as safe and optimal positioning of the treated feet at a working height which is good for your back and for your health. The foot care concept for a better future. Electromechanical, space-saving vertical up and down motion. Electrical adjustment of the seating position (Trendelenbourg), back rest adjustment to horizontal position (cosmetics chair).

Anatomically formed cushioned back and seat parts with stable forms to provide your patients with relaxed, unforced support.

Versatile, individual adjustment options of the one and two part leg and foot supports. Outward rotating by 70 degrees each. Gas hydraulic support.

The chair rotates by 90 degrees to the right and left.

Fixing brakes easily operated from the operator side, at the front.

The complete chair sits on an integrated castor system and is easily rolled to simplify practice cleaning processes.

See page 110 for further technical details.

40 upholstery
colours are available
for selection.

A concept

The CONCEPT chair series will surely play a special role in future high-quality foot care institutions. In this chair concept, we were able to transform our experiences from medical foot care and the requirements of our customers into a technically perfect, welldeveloped solution. The chair series fulfils every ergonomic wish.

An idea

Treatment situations are completely reoriented. These foot care chairs provide the foundation for practice areas which provide patients, podiatrists and foot care providers with completely new levels of safety and comfort.

A brand name

The new chairs are produced in the best German quality. They are available only from us. Would you like to find out about their excellent attributes for yourself? We will be happy to advise you.

Foot care chair Concept F3

Optically very attractive foot care chair with high seating comfort in the best German production quality. This foot care chair is also highly suitable for cosmetic treatments.

Maximum foot height (working height)
137 cm.

Arm rests rotate by 180 degrees (for cosmetic treatments while lying face down), moving synchronously with the back rest.

Equipped with 3 motors to adjust the following:

1. Seat height from 52 cm to 92 cm.
2. Seat angle adjustment (Trendelenbourg) – 3 to 26 degrees.
3. Back rest adjustment from 108 to 180 degrees.

The chair is operated with generously dimensioned, water-tight, hygienic foot control.

With home and reset functions.
Hand control also optionally available.

The chair can rotate completely by 90 degrees to the right and left; comfortable operation from the front.

Chair equipment:

1. Standard – with one-piece, flexibly adjustable leg and foot rests.

Pull-out: min. 37 cm, max. 70 cm.

2. Premium – with two-piece leg and foot rests which can be pulled out independently from each other via two separate carriages. The foot rest additionally rotates for stable heel positioning.

Pull-out: min. 36 cm, max. 76 cm.

Outward leg rest adjustment 70 degrees each, for comfortable patient entry and exit.

Castor system for easy movement of the entire chair. Better cleaning options for your practice.

Incl. neck rest.

**This chair is available
in 40 different colours.
One colour or two-colour
combinations are possible.**

Foot care chair Concept F2

Optically very attractive foot care chair with high seating comfort in the best German production quality.

Maximum foot height (working height) 137 cm.

Fixed-mount arm rests.

Equipped with 2 motors to adjust the following:

1. Seat height from 52 cm to 92 cm
2. Seat angle adjustment (Trendelenbourg) – 3 to 26 degrees

The chair is operated with generously dimensioned, water-tight, hygienic foot control.

With home and reset functions.
Hand control also optionally available.

The chair can rotate completely by 90 degrees to the right and left; comfortable operation from the front.

Chair equipment:

1. Standard – with one-piece, flexibly adjustable leg and foot rests.

Pull-out: min. 37 cm, max. 70 cm.

2. Premium – with two-piece leg and foot rests which can be pulled out independently from each other via two separate carriages.

The foot rest additionally rotates for stable heel positioning.

Pull-out: min. 36 cm, max. 76 cm.

A gas spring supports simple, effortless adjustments of the leg and foot rests to working height.

Outward leg rest adjustment 70° each, for comfortable patient entry and exit.

Max. load bearing of the chair 220 kg.

***This chair is available in
40 different colours.

Foot care chair S 3.2 – extra wide

The proven technology of the S 3.2 foot care treatment chair is now available in a comfortable seat width of 57 cm, and is also ideally suited to cosmetic treatments.

Arm rests are cushioned and fold; they operate synchronously with the back rest.

Equipped with three electromotors to adjust the

1. sitting height from 52-110 cm
2. Seat angle adjustment (Trendelenburg) up to 23°
3. Back rest from 90-180°

The chair rotates completely by 180° (90° to each side).

Padded leg rests pull out easily for especially secure foot positioning.

Leg and foot rests are supported by gas springs, fold out and pull out from 37-53 cm.

The leg rests can each be swung out by 60 degrees.

EUROCLINIC Foot care chair PODOPEG

The PODOPEG is a comfortable and compact patient chair suitable even for smaller practices.

The electric height adjustment raises the seat height from a minimum of 54 cm to a maximum of 100 cm.

The angle of the seat surface can be adjusted up to 23° (Trendelenbourg) in line with the back rest, which can be adjusted from 90° to 180° (reclining position).

Treatment can be carried out up to a maximum height of 114 cm. The chair can be rotated 45° to either side.

The arm rests can be swung sideways or fixed in position.

The leg supports can be swung outwards by 35° to enable the patient to access the chair comfortably. Also especially suited for foot baths.

Also particularly suitable for foot baths. High quality, particularly soft and smooth imitation leather cover in various colours.

A neck support is optional and is available in all colours.

Colour chart for foot care chair

Mobile Foot bath bowl

"Feel good service" foot bath for your customers. The mobile foot bath is the ideal space saver.

Equipped with easy-running castors, the foot bath can quickly be moved backwards and forwards between its position by the tap and the patient.

The foot supports for the GERLACH foot care patient chairs can be folded to the sides, enabling you to just pull up the foot bath to the patient.

This means it takes hardly any effort to cleanse and disinfect your patients' feet.

Your patients will be very grateful, now that you can offer them a beneficial foot bath more often.

High quality chrome, robust tubular steel construction.

With rounded handles and towel rail.

Plastic bowl light grey
38 x 38 x 14 cm.

Can be moved on four castors, two of them with brakes.

Order No.

Pending work chair compact exclusive

Work chair with new ergonomically shaped back rest. The free moving seat can move in all directions. Combined with the high back rest, it forms a dynamic seating system enabling relaxed and comfortable working whilst protecting your back, representing great benefit for your health.

Special feature of seat construction as for the Pending work chair.

Also available with a round seat, \varnothing 46 cm.

Height adjustment by means of gas lift system.

Firmly upholstered back rest.

Safety rotating stand with braked castors.

Seat height: min. 42 cm, max. 53 cm

Back rest: height 50 cm, width 20 cm

Fig. orchid / pearl

Gerlach saddle seat

Special features: the saddle seat prevents an unnatural sitting position which is harmful to health, and prevents back problems. Favours an "upright" posture with a straight back, horizontally positioned thighs and therefore an ideal sitting position.

The saddle seat lets the spine move around its balanced central axis with a natural spinal curvature and minimally strained muscles.

It permits undisturbed postural changes, an optimal visual overview and improved use of the hands. The open sitting position allows good blood circulation.

The saddle seat prevents damage which can occur due to a wrong sitting position.

Seat height: min 50 cm; max. 70 cm

5-legged safety rotating stand with braked safety castors.

Gas lift supported height adjustment.

Available in various colours.

Waldmann LED ring magnifying lamp

Feature overview:

- 48 Premium SMD-LEDs

Keeps everything together that you need to take with you: foot care case with foot care equipment, lamp, leg support, instruments, products. You can then get started on your patient's treatment quickly and without complications.

No problem if you have the new compact **GERLACH foot care cases**.

Everything for foot treatment with you and ready to hand. Even the lamp for illuminating the work field and the foot switch have their own space.

Trolley with case AT/NT MICRO

Trolley for Case AT/NT MICRO

Make a professional impression on your patients with the silver-coloured foot care case for SATURN/LUNA/SIRIUS in a handy briefcase format.

Just open the case and everything is ready to use and in the perfect position. The elegant, mobile foot care case offers plenty of space and is comfortably carried, thanks to its slim, flat construction.

If you want to make it even easier to transport, there is an additional extremely practical case trolley available. The safe, easy-running trolley will allow you to transport your foot care case to the patient in comfort. It is easily removed from the case if required.

The advantages:

- with few handles to fix on the case.
- large, ball bearing wheels with air-filled tyres for smooth running.
Transport your valuable technology, instruments and other utensils safely.

GERLACH transportable leg support

in practical carry case.

Leg support made of integral foam. Stepless height adjustment using turning handle, angle can be adjusted by hand using turning handle.

Height: min. 45 cm, max. 67 cm

Weight complete: 2.0 kg

Weight without carry case: 1.6 kg

*For an optimally illuminated treatment area:
The LED lamp is fastened on the side of the case,
adjusted and operated via the foot care device.*

GERLACH foot care case

The new, especially light case generation, only weighing approx. 2.9 kg.

Especially large stowing room for the required instruments in foot care. All instruments such as grinding tools, grinding bodies, sterilised instruments, bandage materials etc. can be stored in differently sized, tightly closing boxes in a hygienic and safe manner.

Arranged in a manner which provides a good overview, this case offers the right prerequisites for simple foot care which is comfortable for you. The changeable boxes allow changes to an instrument resupply which can be left in the vehicle. An easily swingable aluminium standing foot ensures that the case will stand firmly. This narrowly built case can be carried on the body particularly well.

The foot care suction device TRITON AT MICRO and the foot care spray device NEPTUN NT MICRO which were built especially for this case, ideally complement this mobile foot care case.

TRITON AT MICRO: Weight: approx. 2.7 kg; Description see page 138

NEPTUN NT MICRO: Weight: approx. 2.7 kg; Description see page 136

Perfect hygiene and optimal work processes in a new dimension - these are the special features of this foot care case.

Dimensions: 455 x 385 x 163 mm

Weight: approx. 2.9 kg

Equipment: 3 trays

Material: light ABS, smooth on the inside and outside with a scratch resistant, hard acrylic coating

Colour: silver grey

Utility patent protected.

Foot care spray device NEPTUN NT MICRO with light

Small - light - high performance.

The high performance foot care spray unit with light hand piece and micromotor.

Our small "BIG ONE" fits precisely into the Gerlach foot care case.

The NEPTUN NT MICRO has small dimensions.

Light weight - only 2.7 kg.

Micromotor with very high torque.

Continuous speed from 2,000 to 42,000 rpm.

Motorised hand piece with 2 LEDs on the hand piece tip for bright, shadowless illumination of the treatment field.

User friendly foil keypad with 25° incline to the back, can be disinfected.

High performance hand piece motor with automatic chuck.

Memory function for three freely selectable speeds.

Easy to read digital speed indicator.

Right/left rotation of the hand piece motor.

Spray tank 250 ml (enough for more than 30 hours of continuous spray), spray quantity can be saved and spray quantity is freely selectable.

Service display.

Technical data:

Total weight: 2.7 kg

Exterior housing dimensions: (W/H/D) 14 x 13 x 35 cm

Power supply: 110-240 Volt, 50-60 Hz

Hand piece: 30 V/DC

Housing colour: platinum silver

User friendly keypad

Spray hand piece with light

Optional:

- Foot care case
- LED case lamp
- Cable-free remote foot switch
Multichannel with three functions for grinder/spray ON/OFF as well as dry blower

Foot care spray device SIRIUS NT MICRO with light

High performance foot care spray device with light hand piece.
Programmable 2,200–42,000 rpm.

Electric micromotor hand piece with automatic tension and integrated spray control.

Weight of hand piece only 170 g.

Right/left running.

Hand piece lead for large work areas in the practice and on home visits. Stepless control between min. 2,200 and max. 42,000 rpm, constant power distribution electronically commuted over the whole range, maintenance-free.

Three speeds, individually programmable with ease, large digital display for the dial, LED display for adjusting the spray quantity.

Very finely adjustable spray quantity, adjustable in two levels, including nozzle cleaning needle and 12 drip caps (see page 244).

User-friendly key pad is inclined at 25°.

Cable-free foot switch with three functions for burr and spray ON/OFF, and dry blower.

500 ml spray tank for 65 hours of spray time.

Technical data:

Total weight: 2.9 kg

Dimensions: W 28 cm, H 11.5 cm, D 28 cm

Power connection: 110–240 V/50–60 Hz

Hand piece: 30 V/DC

Foot care suction device TRITON AT MICRO

Light, high performance foot suction device weighing only 2.7 kg, in an especially compact construction. Precisely fits with the GERLACH foot care case.

6,000-30,000 rpm – 120 l/min suction performance at the hand piece tip.

Anti-slip, light, handy, ergonomically built micromotor hand piece (weight 115 g).

With optimised, flow favouring all-round suction and perfect protection of the hand piece interior.

Automatic mounting tool, quick mounting collar for rapid grinding tool change.

Three grip pads. Runs with extremely low vibrations.

Hand piece cover with bayonet closure – quickly removable for disinfection and cleaning.

Especially light and very flexible suction hose. Therefore gentle on the arms for all work during home visits.

Power range 6,000 – 30,000 rpm, adjustable in 10% steps.

Strong, even power over the whole power range.

Right/left running.

Maintenance-free hand piece, electrically commuted micromotor.

Noise-shielded, especially quiet suction apparatus. Max. 120 l/min/60 dBa.; 700 watt, 3 selectable stages.

User-friendly membrane keyboard angled at 25° with two-digit display of the set speed of the hand piece motor.

Cable-free multi-function foot switch (optional).

Size of dust bag 400 cm³, outgoing air filter.

Technical data:

Total weight: 2.7 kg

Dimensions: W 350 x H 140 x D 140 mm

Power connection: 220/240 V/ 50-60 Hz

Foot care suction device SATURN AT MICRO

High-performance device, meeting the highest demands with impressive optics.

Programmable 5,000–42,000 rpm – 150 l/min.

Slim, handy, lightweight (weight: 116 g), easy to clean micromotor hand piece with three grip pads. Very low vibrations.

Light and very flexible suction hose. Ideal for all work areas in the practice and on home visits.

Power range 5,000 – 42,000 rpm, three range areas, individually programmable.

Strong, even power over the whole power range.

Powerful, especially quiet-running suction 150 l/min/67 dBA.; 700 watt, adjustable in 10% steps, excellent suction turbine noise damping system.

No maintenance, electrically commuted micromotor.

Cable-free multi-function foot switch (optional).

User-friendly membrane keyboard angled at 25° with large, three position digital display for the speed dial and suction performance adjustment.

Size of dust bag 400 cm³. An air filter for clean room air. Electronic dust bag full indicator.

PUCK MICRO

PUCK MICRO is the ideal second device for your practice – for manicures and pedicures.

The micromotor hand piece is slim and handy, with a very powerful, maintenance-free electrically commuted electric motor.

Stepless regulation from 2,500 to 20,000 rpm for constant power.
Right/left rotation for all work in foot care and manicures.

The PUCK MICRO has a user friendly, hygienic foil key pad which is inclined back by 25° with a digital display of the set speed.

Hand piece: diameter 20 mm, length 158 mm, weight 180 g

Low vibration operation, maintenance free.

It is possible to use the cable-free Multichannel foot switch (on/off and right/left running) for easy, even more comfortable use.

Technical data:

Totalweight: 990 g

Control unit dimensions: W 11.5 cm, H 9.5 cm, D 15.5 cm

Power connection: 110–230 V/50–60 Hz

Electric micromotor hand piece for foot care

The house of GERLACH has been developing and selling electric micromotor hand pieces for over 40 years.

With a wide range of rotating instruments (burrs, grinders, etc.) increasingly greater demands are always being made. This has led to the technical innovation of the drive motors – with smaller dimensions but greater performance.

Due to the partly large rotary instruments which are used, foot care requires much higher force (torque) than other fields. The GERLACH electromicromotor hand pieces fulfill these performance requirements.

Equipped for spray or suction technology. With automatic tensioning that automatically closes on running, for faster burr changes. There is an appropriate hand piece available for all podiatry applications.

During the construction of these lightweight and useful hand pieces, special attention has been paid to the ergonomic and hygiene requirements of modern medical foot care.

Hygiene for safety and confidence

Hygiene represents a new demand on the foot care practice every day. In medical surgeries and in hospitals, there is always a high risk of infection with microorganisms. In foot care, too, there is a danger of transferring infection. Podiatrist and foot care professionals are therefore obligated to take hygienic measures and are subject to state supervision.

A clean, bright and friendly furnished practice as well as clean cases for mobile applications is the basis for the trust of clients in your foot care operations. However, the responsibility of the treating person exceeds these outward measures, although they are undeniably significant. The transmission of disease must be safely prevented in every foot care treatment to protect the health of the client and the treating person. Besides hand and skin hygiene, consistent instrument hygiene is mandatory. This comprises sterilisation along with care, cleaning and disinfection – according to whether the instrument in question is an uncritical, semi-critical or critical instrument.

However, if cleaned and sterilised instruments are stored inappropriately, there is danger of recontamination with pathogens. Transmission to the next patient can only be excluded by effective and consistent hygiene measures.

During ultrasound treatment, tiny cavitation bubbles in the fluid (causing bubbles), impinge between the instrument and the instrument.

The cavitation bubbles are able to collapse (implode) and separate the dirt from the instrument surfaces.

Like all instruments, grinding and polishing tools are a potential source of infection.

(Photo: uncleaned grinding tool, grinding tool cleaned with ultrasound).

Risk evaluation of medical devices for hygienic processing

Non-critical instruments

- Contact with intact skin – cleaning and disinfection

Semi-critical instruments

- Contact with mucous membranes and infectious skin – at least cleaning and disinfection with tested agents and processes – sterilisation optional

Critical instruments

- Contact with blood – preferably machine cleaning and disinfection (such as ultrasound) – sterilisation mandatory; preferably steam sterilisation

1. Cleaning and disinfection

The following applies for all instruments:

To render pathogens harmless immediately and avoid uncontrolled spread of pathogens, every instrument used must be cleaned and disinfected after a treatment.

An ultrasound unit is recommended for cleaning. Ultrasound cleans especially thoroughly – even in places which a brush can never reach. And the cleaning and sterilisation can be carried out in one work process by using a disinfectant that is compatible with ultrasound. The disinfectant should be tested and listed by the Association for Applied Hygiene (Verband für angewandte Hygiene = VAH). During the application, it is essential that the prescribed dose and reaction time are adhered to. This means that after the sonic radiation time, you must still wait until the recommended disinfection time has been completed, if necessary. Afterwards the instruments are well rinsed under running water and then dried with a disposable cloth. Finally a special instrument oil is applied to the gripping areas of clippers and scissors.

2. Sterilisation

Critical instruments must be and semi-critical instruments should be sterilised. Sterilisation renders even resistant pathogens and spores harmless, which the disinfection process does not kill. After the cleaning and drying processes, the open instruments are placed into the hot air steriliser or autoclaves (stainless steel instruments).

An autoclave sterilises by means of a combination of pressure and steam at temperatures of 120 to 134 °C. Objects made of rubber and plastic (conditionally) or textiles can be autoclaved. Used, corroded, misshapen, porous or otherwise damaged instruments should be immediately sorted out in order to prevent that rust is transferred to healthy metal. Sterilisable boxes or disposable packaging prevents reinfection.

The following recommendation applies to hot air sterilisers: Only in this way can adequately high temperatures (180 °C) be guaranteed in each part of the sterilisation chamber.

3. Instrument storage

Even if all microorganisms have been destroyed by the sterilisation, there is a danger of recontamination as soon as the autoclave is opened - if the instruments have not been individually packed. The frequently practised process of sterilising instruments prior to leaving work at the end of the day and then leaving the instruments to cool down overnight can cause recontamination. Hence it is essential to remove the instruments directly after the sterilisation procedure and to store them in a sterile location.

If the sterilisation process is carried out in closed sterilisation cassettes (accessories for the autoclaves), these are removed from the device and simply put away to cool down in a location that is protected from sunlight and draughts. Unopened, the cassettes will then keep their contents sterile for up to six weeks – although of course the cassette is not available for this period.

Alternatively the storage of the sterilised instruments in a UV compartment (component of almost all Gerlach foot care cabinets) is especially practical and saves time and costs. After the sterilisation, you can take the instruments out of the hot air steriliser and lay them directly into the UV compartment. The instruments cool down in the UV compartment, where they remain germ-free until they are used again. Two or three plastic trays are at your disposal for the storage. The use of several trays at the same time will guarantee smooth operations under sterile conditions:

- The first instrument set is ready to be used to treat feet directly at your work place.
- A second set of instruments is stored under sterile conditions to be cooled in the UV compartment.
- And a third set of instruments can be sterilised in the meantime.

This division of work puts you in the position to treat all your patients under optimal hygienic conditions. You should not hide your hygiene competence from your customers – quite the opposite. Carry out routine measures quite deliberately so that the customer is also aware of them. A high standard of hygiene and health protection is expected by every client, particularly in relation to bodily interventions. Whoever feels well cared for in this respect will make a new appointment in your practice and recommend you to others.

Note:

As a foot care professional, you are obligated to document the entire hygiene process in your foot care practice with a hygiene plan. It must clearly define every process step. In addition to the hygiene plan, the individual sterilisation processes must be documented. A gap-free and long term as well as time saving recording option is provided by good PC programs as they are available e.g. for the autoclave MELAtronic 15 EN+.

The highest legal basis for these duties is formed by the Infectious Diseases Act (Infektionsschutzgesetz = IfSG) as well as the guidelines of the Robert Koch Institute (RKI) for the prevention, detection and prevention of spread of transmissible diseases. The "Requirements for hygiene when processing medical devices" particularly apply to foot care practices. This recommendation was published by the RKI and the Federal Institute for Drugs and Medical Devices.

High grade construction

Miele continuously works with robust materials with low wear in the construction of the cleaning and disinfecting automats. This results in devices with a long service life and especially little maintenance in daily use.

- Double walled structure, door with insulation for the best sound damping effects
- Washing container and water routes made from stainless steel
- Fabric reinforced hoses

Cleaning technology

- Hygienic freshwater washing system with water changes after every washing phase
- 2 washing arms (3rd washing arm on upper basket) for thorough instrument surface cleaning
- Optimal arrangement of washing nozzles and washing arm rotation speed
- Injector system for thorough hollow body cleaning
- Direct link of drawers and baskets to water routes

Series technical equipment

- Pro Monobloc water generator, regulates water in the cleaning program with low steam consumption
- High performance circulation pump with variable performance of 400 l/min
- Four-fold filter system with large-area strainer, coarse and microfine filter for fine filtration of dirt particles
- Efficient steam condenser on heat exchanger basis (G 7831 and G 7882 CD) or with spray mist technology (G 7892 and G 7882 CF) to prevent steam from being passed into the water
- Multiple-jet impulse water meter to check inflowing water quantity
- Integrated dosing pump for liquid media
- Connection option for liquid media
- Integrated dosage monitoring
- Hot air drying for short process times (G 7892 and G 7882 CD)

Construction

- Use as a standing unit or built in as undercounter unit in a work line

Interfaces

- Serial interface for process documentation
- Optical interface for customer service and service activities; with PC connection: expandable to USB interface

Safety systems

- Electrical door lock
- Program failure backup
- Optical and acoustic signal at program end
- 2 sensors to regulate and monitor process temperature
- Measuring access for simple positioning of measuring sensors in the washing container as part of validation
- Safety system according to EN ISO 15883

Cleaning and Disinfecting Automat Disinfector G 7831

- Standing / undercounter unit
- Exterior housing white or stainless steel
- Construction width 45 cm H 850 (820), W 450, D 600 mm
- 2 loading levels
- Circulation performance: 200 l/min
- 5 programs
- Common household alternating current hookup
- Processing per batch: 1 DIN sieve and 4 small sieve bowls (E 146) or 24 GYN specula

Cleaning and disinfecting automat G 7831, Front colour "white"

Desinfektor G 7831 incl. upper and lower basket, inset for standing instruments, inset for 8 trays and the DOS K 60 dosing module.

Upon request

Vario TD program

Pre-cleaning takes place at low temperatures in the varioTD program so that blood residue does not denature.

After an intensive main cleaning phase, thermal disinfection takes place at $>90^{\circ}\text{C}$ with a five minute hold time.

For optimal care of e. g. surgical instruments, the final rinse preferably takes place with VE water without a clear rinse agent. This program is suitable for routine processing in accordance with EN ISO 15883, for all thermostable instruments.

The process is especially gentle on materials. In the cleaning and disinfecting automats G 7892 and G 7882 CD, hot air drying ensures a final thorough inner and outer drying of the instruments.

The SPECIAL 93°C -10' programm is used when required according to epidemic laws in accordance with § 18 of the Infectious Diseases Act (Infektionsschutzgesetz = IfSG). According to the Robert Koch Institute, both procedures cover the A and B acting fields with a fungicidal, bactericidal and virus inactivating effect, including HIV.

Cleaning and Disinfecting Automat Disinfector G 7882

- Standing / Undercounter unit
- Exterior housing white or stainless steel
- Construction width 60 cm H 850 (820), W 600, D 600 mm
- 2 loading levels
- Circulation performance: 400 l/min
- 10 programs
- Rotary current hookup for short program run times
- Integrated dosing pump for liquid process chemicals (neutralisation agents)
- Processing per batch: 4 DIN strainers or 48 GYN specula

Accessories

Cleaning and disinfecting automat G 7882, Front colour "stainless steel"

Desinfektor G 7882 incl. upper and lower basket, inset for standing instruments, inset for 10 trays and the DOS K 60 dosing module.

Premium class sterilisation. SK07S. Hygiene for safety and trust.

The SK07S autoclave is the premium class in sterilisation. The installed components were selected with special care. The modern electronics are highly reliable and user friendly. The intelligent safety system immediately provides information about deviations or abnormalities in the sterilisation cycle.

The ergonomically mounted keypad makes it extremely easy to operate the entire unit with four buttons. The integrated LCD display informs you about all instructions and information regarding current processes. The optimal and rapid performance, low noise volume and reliable high quality components system guarantee the highest quality for

Autoclave sterilisation – fast sterilisation with the MELAtronic® 15 EN+ S-Class Autoclave

With the newly developed autoclave as a successor of the MELAtronic® 15 EN the MELAtronic® 15 EN+ possesses all the functions of its predecessor and is also provided with a drying phase integrated in the sterilisation process, which ensures packed and dried instruments.

The associated benefits:

- Reduction of the danger of corrosion and rust due to moisture.
- No danger of re-contamination due to moist packaging.
- Even greater legal certainty in the case of practice inspection.
- The drying result can also be validated now.

MELAseal® 100+ – MELAfol®

The new foil sealing device MELAseal® 100+ is the successor of the MELAseal® 100 which has been tried and tested many thousand times. It is distinguished by its efficiency and enhanced ease of operation.

After a brief pre-heating time of approx. 2 minutes, the foils can be sealed successively without the need for pauses. The sealing weld width of 10 mm considerably exceeds the minimum width of 6 mm specified by EN 868-5.

An electronically controlled optical and acoustic indication that the device is ready for operation is a new feature. The infinitely adjustable thermostat guarantees a freely selectable sealing temperature to enable packs that have been processed in different ways can be sealed.

Housing made of brushed stainless steel.

With the cutting system integrated in the device, the packs can be individually coordinated with the requirements of the practice and with the sizes of the instruments to be packaged.

MELAseal® 100+
fig. incl. roll holder "Comfort" and MELAfol rolls

The MELAtronic® 15 EN+ is fully automatic in operation, i.e. all processes such as water dosing, water supply, sterilisation, pressure release and active drying run automatically in the selected program. The low working temperature can be selected as 134°C or 120°C to protect the materials. There is a choice of four sterilisation programs.

With the MELAtronic® 15 EN+ the time periods required for you to sterilise your stainless steel instruments will be shorter.

Autoclave safety is provided by the information display and the electric door locking. The equipment can either be connected to the mains water supply or operated in an instrument protecting one-way water system. The autoclave has an interface for connection to a printer or PC to obtain documentation.

The MELAtronic® 15 EN+ is especially future oriented, as it is compliant with the European Standard EN 13060 and can be validated in accordance with EN ISO 17665.

MELAflash® – documentation set

MELAflash® – all advantages at a glance

- simple handling
- no additional software required
- clear, gapless and long-term documentation of the sterilisation processes

Recirculating hot air steriliser M 75.1

The M 75.1 recirculating hot air steriliser fulfils in an exemplary manner customer requirements for a compact, economical piece of equipment.

The M 75.1 recirculating hot air steriliser with mechanical air movement corresponds to the requirements of the government health authorities. Mechanical air movement prevents pockets of cold air which endanger or invalidate successful sterilisation.

The M 75.1 recirculating hot air steriliser can be equipped with trays or closed aluminium cassettes.

The running time when trays are used is 60 minutes and for closed cassettes 90 minutes.

The M 75.1 is a front-loading module with 120 minute timer, fully automatic temperature regulation, fully adjustable thermostat and inbuilt thermometer.

Dimensions (W/H/D):

exterior 31.0 x 26.0 x 37.5 cm
interior 19.4 x 7.4 x 29.5 cm

Power connection: 230 V, 50 Hz, 650 W

Weight: 11 kg

Equipment hood and interior container made of stainless steel.

GERLACH PODO PRO 1 (0.8 ltr.) PODO PRO 3 (2 ltr.)

GERLACH presents the first ultrasound cleaning units for foot care with 5 fixedly programmed cleaning programs – just like a washing machine.

Program

- 1 Stainless steel burrs
- 2 Hard metal and diamond burrs
- 3 Long instruments
- 4 Clippers, scissors, grinders
- 5 Universal program

Comfort for the user – improved quality of the results.

Simply select the program, press the start button – and away you go.

No more nuisance parameter settings such as time, sweep, Degas etc.

No operating errors.

No reading, thinking, testing.

Simplify daily work.

Improved cleaning results with pre-set, optimal work processes.

	Order No.	MD

Ultrasound cleaning device ELMASONIC S podo basic

For efficient, simple and quick cleaning and disinfection of foot care instruments in one single step.

User friendly and clearly arranged control unit with rotary selection switch for the convenient selection of the cleaning time, adjustable between 1 and 30 min.

Foil keypad with LED display for ultrasound function.

Cleaning tub and housing made of stainless steel.

Automatic safety shut-down after 12 hours operation.

Long service life with balanced performance spectrum.

With sweep function for optimised ultrasonic field distribution and frequency modulation.

Including: self draining lid, instrument basket and 2 beakers for small parts, tweezers.

Dimensions (W/D/H): 206 x 116 x 178 mm

Trough dimensions: 190 x 85 x 60 mm with 0.8 ltr. filling capacity

Basket inside: 178 x 80 x 47 mm

Weight: 2.0 kg

Ultrasonic frequency: 36 kHz

Instrument disinfection tub

Construction: tub and sieve of PVC
Colour: white with line marking

Wound care and first aid

In their professional everyday work, foot specialists are often confronted with wounds, e.g. when treating diabetics. But other injuries - even those related to treatment - are regularly seen in foot care practices. As a foot care professional, one never really knows what one will find when the customer takes off their shoes and socks. Is it "just" untrimmed nails, too much callus or a not too deep corn? Or is the customer presenting an ingrown, pus-ridden nail, an inflamed corn or a deep, wetting crack? Careful action is required in any event.

What is a wound?

A wound is a forcible separation or damage to the skin and/or underlying tissues. Wounds are differentiated by the way in which they occurred (mechanical, thermal, chemical and ulcerative wounds). They, in turn, are classified by depth, absence of pathogens as well as location and extent. Mechanical injuries are most common. They include abrasions, cut, stab, crack, burst and bite wounds as well as skin blisters, bruises and skin detachment. Thermal and chemical wounds tend to be rare in a foot care practice. If in doubt, send the patient to a doctor! But in order to reduce the risk of wound infection and also encourage wound healing, rapid and well founded first aid is required. In principle, the following is true for all injuries: The wound should be carefully cleaned and disinfected. However the further care depends on the nature and type of the wound. And for the so called First Aider: Wear protective gloves to protect yourself against infections!

Mechanical injuries

Abrasions

Only the upper skin layer (epidermis) is affected in abrasions. Abrasions don't bleed much, since "only" the fine skin capillaries torn open.

But these injuries are often very painful. Depending on where the abrasion was acquired, there is a higher risk of infection due to dirt particles or foreign bodies. The abrasion must therefore be carefully cleaned, e.g. with two to three percent hydrogen peroxide solution (H₂O₂), and then disinfected. For instance, Octenisept is suitable for this purpose. Abrasions normally heal on their own without scars. A suitable wound bandage can support this healing process and protect the wound against infections.

Cut wounds

Cut wounds may have various depths. For treatment, it depends on which skin layers are affected. Superficial, not strongly bleeding cut wounds of the epidermis are best treated like abrasions - clean, disinfect and provide a wound bandage (plaster). The deeper the wound, the greater the risk of complications. In cuts which reach into the deeper skin layers, there is a risk of nerves, larger blood vessels and tendons being affected. These wounds also normally bleed a lot. A doctor's examination is mandatory in such a case. First aid includes keeping blood loss as low as possible. It's often enough to position the affected body part high and protect the wound with a sterile bandage. If this does not stop bleeding, a pressure bandage should be applied. Deep cut wounds must be treated as quickly as possible to avoid consequential damage such as paralysis in severed nerves and unattractive scars.

Fungus pathogen Zygomycota

Tear wounds

Unlike cut wounds, tear wounds, which also includes cracks, tend to have characteristically frayed edges. This is associated with a higher risk of infection. Treating such wounds therefore starts with generous flushing. If the wound edges are already callused, which is often the case in cracks, they must be carefully removed. The wound can otherwise not grow together. If a primary suture (e. g. staples) is required to close the wound, only the doctor is allowed to do this.

Skin blisters (bullae)

Foot care professional see blisters almost daily - primarily on the heel, the toes or the soles of the feet. Excessive, unaccustomed strain forms a hollow space between the epidermis and dermis, which is filled with tissue fluids. This "biological wound bandage" protects the irritated dermis and should therefore not be opened or removed. Only large blisters should be punctured. But this must also be done only by the doctor.

If the blister is already open, the epidermis should not be removed. Hydrocolloid bandages (e.g. GEHWOL Blister Plaster) accelerate healing here.

Skin detachment

Detachment of the skin from the subdermal cellular tissues is very painful and leads to a severely bleeding wound. Treatment should be performed by a doctor. The doctor is normally the first starting point for a patient with detached skin. However, diabetics with neuropathy unfortunately often acquire such a foot lesion without noticing it. Very often, it is the foot care professional who first discovers such injuries.

You must send such a patient straight to a doctor. For there is a risk of the detached skin area dying off (gangrene).

Everything done right

The currently valid laws state that wound care is a form of medicine and is therefore not part of the expertise of a foot care professional or podologist. This means that only a doctor is allowed to provide medical wound care. However, one is obligated to provide First Aid. But if you cross the line to medical wound care, you may possibly make yourself guilty of a bodily injury. To protect yourself and your customers against harm, you should note some behavioural guidelines:

- Lack of knowledge does not protect you against penalties! As a foot specialist, you have to know what you are and are not allowed to do.

And:

- You have to know what you are doing.
- Document precisely whether and with what wounds your patient came to you, and have them confirm it.
- Seek medical support!
- Inform your patient in a corresponding conflict situation!
- Refresh your First Aid knowledge.
- Protect yourself! Use gloves, mouth protection and regularly refresh your vaccine protection, and become familiar with required First Aid measures after injuries with potentially infectious materials.

First Aid measures after injuries with Hepatitis-B/C and HIV infected materials

Stab injuries	<ol style="list-style-type: none"> 1. Increase blood flow 2. Allow to bleed out > 1 minute 3. Disinfect with 80% alcohol 4. In Hepatitis B/C, immediate passive vaccination with immunoglobulin
Cut injury	<ol style="list-style-type: none"> 1. Increase blood flow 2. Flush with a virucidal antiseptic 3. Disinfection
Skin exposure <i>(in previously damaged skin)</i>	<ol style="list-style-type: none"> 1. Remove the infected material using alcohol swabs 2. Soak the affected and adjacent areas with 80% alcohol
Eye exposure	<ol style="list-style-type: none"> 1. Immediately flush with plenty of water, possibly with 5% aqueous PVP solution or Betaisodona solution 1:1
Oral cavity exposure	<ol style="list-style-type: none"> 1. Immediately spit out several times 2. Repeatedly flush with 80% alcohol several times

Hygienic preparation

When hygiene plays an important part you have to set the highest standards. In the statistics for work related illness, skin diseases are very high, as germs and bacteria cannot be removed with superficial cleaning. And germs are lurking everywhere! Disinfection is therefore the key to hygiene.

GERLACH TECHNIK offers you the right solutions for all areas: disinfectants for skin, wounds, surfaces and instruments. Our products are designed in accordance with the latest scientific research and to the individual requirements of the different areas: they make work safer and support your professionalism when you are dealing with patients and materials.

Preventative safety

Preventative protection is the first line of defence when it comes to skin protection. Hands are the most common means of transferring germs, so this is the greatest area of need, but this is not limited to disinfection of the skin. When it comes to hygiene, ordinary cleansing – washing with water – plays only a small part. Water cannot really reduce the number of germs sufficiently, and it can damage sensitive instruments. With our disinfectants, you can be on the safe side.

Solutions from GERLACH

The GERLASAN hand cleaning system offers skin and hands gentle and comprehensive protection from germs of all sorts. Selected, reliable ingredients provide effective protection for the skin without putting pressure on you, even with frequent cleansing.

Stellisept med foam is new to the range. The product is extremely compatible with the skin and with the mucous membranes. It is simple to use and has a wide spectrum of effect (against bacteria, including MRSA/ORSA, salmonella and listeria). It does not contain alcohol, which makes it even more skin compatible.

The range also includes the ELTRA full wash disinfectant. For disinfecting white and coloured textiles in a 60 °C wash. Washes and removes stains, bleach effect with fibre protection, time to take effect 15 min at 60 °C.

There is also the mild, aldehyde and phenol free instrument disinfectant **BIB forte eco** (concentrate) and the extra mild **PlastiSept** disinfectant foam for cleaning sensitive surfaces of treatment chairs.

Cleaning, hand cleaning and care

Single use wrap case

GERLACH offers you an always ready, hygienic, time saving and highly cost effective option for safe instrument transport: the **single use wrap case**. It is made from sturdy polypropylene, which is also used for medicinal products such as mouth and nose protection masks. The **single use wrap case** measures 65 cm x 30 cm when spread out. It has 13 insertion compartments with a width of 6 or 3 cm and a large insertion compartment on its left side. Using two sewn-on tapes, it is easily closed with a knot. Especially handy for outpatient foot care.

GEHWOL Nail Repair System

The GEHWOL Nail Repair System is a complete package for nail repair for manicures and pedicures.

It consists of the light hardening 1 phase GEHWOL Nail repair Gel in the clear, pink or opal versions and the GEHWOL Nail Repair Cleaner.

The GEHWOL Nail repair Gel

Nail repairs are simple with the GEHWOL Nail Repair Gel! There is no need for complicated mixing and no time pressure, because the Nail repair Gel is applied directly from the tube and only hardens under UV light. The gel is hygienically and precisely dosed with the tip of the tube – as thrifty as possible!

The GEHWOL Nail Repair Gel is suitable for the cosmetic improvement of nails as well as for nail prosthetics, e. g. after a fungal infection of the nail.

Causes

The most frequent reason for which a nail must be partly or wholly replaced are growth disturbances (onychodystrophy) which are usually caused by nail fungus diseases (onychomycosis). Brittle nails (onychorrhexis) or detaching nails (onycholysis) also require a nail prosthesis. But nail removal is also often unavoidable in keratosis or subungual corns (beneath the nails). In some cases, trauma (injuries) also leads to partial or complete nail loss.

Advance work

Before the artificial nail can be produced, thickened nail parts and nail areas which are infected with fungi must be removed.

Then the prepared nail is freed of loose nail parts. The nail edge must be carefully cleaned. The remnant nail plate must be free of fats so that the artificial nail can adhere to it.

The nail remnant is cleaned and de-greased using GEHWOL Nail Repair Cleaner. The nail plate can be slightly roughened with a blunt instrument.

Nail Repair Cleaner Before using GEHWOL Nail Repair Gel work on the nail which will be treated and then clean and degrease it with GEHWOL Nail Repair Cleaner. The dispersion layer after the nail is completely built up is optimally removed with GEHWOL Nail Repair Cleaner. It can also be used to clean unhardened GEHWOL Nail Repair Gel off instruments and out of paintbrushes.

Modelling

After the pre-treatment, the first layer of the GEHWOL Nail Repair Gel is applied onto the nail directly out of the tube.

The new GEHWOL Nail Repair Gel high viscosity is especially suited to detailed modelling work. The three colours of clear, opal and pink can be mixed with each other so that the nail colour can be optimally adapted to the natural colour. The clear gel serves as a filling base. Naturally, both colours can also be added to design a colour. Mixing is most easily done directly on the nail bed. Due to the increased viscosity, the gel can be applied with point precision without running. This makes it much easier to work with. And since the gel only solidifies under UV light, the new nail can be modelled with a brush without time pressure. Special modelling brushes with exchangeable heads are good choices. They can be changed after every treatment, so that hygienic work is guaranteed.

If your customer has a free, white nail edge on the other toes, you can easily form this with the new gels without needing a template. Draw a fine line along the distal (upper) end of the artificial nail with the highly viscous opal gel. Then the layer is hardened for two minu-

tes under a special lamp with pure UVA light (380- 400 nm). A firm, but simultaneously elastic nail is best produced with three layers of gel.

To seal the finished nail, it is best to apply a thin layer of GEHWOL Nail Repair Gel. Depending on the colouration of the artificial nail, use the colour "clear" for this, or if the nail appears too white, use "pink", or for an unnaturally pink nail, "opal". The nail will also have an attractive shine which can be increased by polishing.

Protection

The highly effective antimycotic additives in the nail gels mean that no nail fungus disturbs the regrowth. You should also treat the nail bed, e.g. with GEHWOL med Protective Nail and Skin Oil. It distributes well between the artificial nail plate and the nail bed, protecting against mycosis.

Use on hands

Untreated nail

Preparation

Application of the gel

Finished nail –
GEWOL Nail Repair Gel
pink on the left, clear on the right.

Use on feet

Atrophied nails can be filled up with highly viscous gel.

Freed from fungi and without loose nail remnants, the nail bed is optimally prepared for reconstruction.

To build up the artificial nail, the highly viscous gels opal ...

... and pink are applied directly to the nail bed ...

... and mixed with a brush, then modelled.

A white free nail edge makes the prosthesis appear more natural. It can be formed with the Nail repair Gel high viscosity, opal.

Artificial or natural? A properly done nail prosthesis is not recognisable as such at first glance.

Also for use with braces

GEHWOL Nail repair Gel has many uses. Aside from treatment for defective, brittle and torn nails and rebuilding diseased nails, it is also suitable for the problem-free fastening of nail braces.

Fig. right:
Applying GEHWOL med
Protective Nail and Skin Oil

UV light hardening device

The individual gel layers harden under the UV light hardening device in only 2 minutes. It is possible to dry several layers at once. But your customer does not have to worry about a tanned toe. The short exposure time is not enough for this.

The GEHWOL Nail repair Gel only hardens under the UV light hardening device.

UV lamp for mobile foot care

Equipped with 21 UV black light LEDs. Housing made from stainless, resistant, eloxated aluminium. Ideal for mobile foot care with a weight of only 115 g (without batteries). Requires 3 AAA batteries (not included in the scope of delivery). Length: 9.5 cm, head diameter: 3.5 cm.

To harden the gel, hold the lamp over the treatment field at a distance of about 2 cm for at least 2 minutes.

The gel modelling brushes are good for "forming" the gel.

HH 106 R

The GEHWOL Nail Repair Gel can also be processed using the double instrument HH 106 R. On one side, it has a wide area with which the gel is easily distributed; on the other side, it has a narrow part with which you can work on the edge of the nail and remove excessive gel.

Products for wound care

Chirofix

Self adhesive fixation bandage with high air and water vapour permeability. Extremely thin, with crosswise elasticity. Tear resistant and very supple. Does not leave behind adhesive residue on the skin.

	Order No.	MD
1,25 cm x 10 m, 4 items	315 170 500	CE
2,50 cm x 10 m, 2 items	315 170 600	CE

Curaplast® Sensitive

Soft, supple fleece bandage for sensitive skin. The fleece material with its slight crosswise elasticity adjusts well to body contours and securely affixes the wound cushion on the skin. A microperforated separating film prevents adhesions to the wound region. The healing process is influenced positively by gentle, painless bandage changes. Skin coloured fleece material, 100% polyester, with continuous wound cushion, skin friendly colophonium and colophonium derivative free polyacrylate adhesive.

6 cm x 5 m	315 170 400	CE
------------	-------------	----

CUTIPLAST*STERILE

A wound bandage for primary wound care. Does not adhere to the wound; sterile, elastic and therefore adjusts extremely well to contoured body regions. Elastic and actively breathing. Gentle and painless. Absorbent and secure. Air and water vapour permeable. Wound bandage for emergency wound care.

7,2 cm x 5,0 cm, 100 items	316 800 700	CE
----------------------------	-------------	----

FOCALEX BLUE N

Proven, refreshing, alcohol care solution to protect against foot and nail fungus. Easily absorbed neutral oil and essential oils provide care for affected skin and nails. The thin liquid solution penetrates thoroughly into the tiniest skin and nail crevices.

10 ml solution for brushing on	314 221 700
--------------------------------	-------------

FOCALEX RED N

Alcohol care solution for sensitive skin in pressure spots, e. g. on the balls of the feet, nail bed, around corns etc. Very well suited to care of nail bed pressure spots after nail modelling with artificial finger nails.

10 ml solution for brushing on	314 221 800
--------------------------------	-------------

Gazofix®

Gazofix® is a cohesive, elastic, extra thinly woven fixation bandage with very good skin tolerability.

Gazofix® adheres to itself (not to the skin and clothing).

With micropoint latex coating for a reliable fit. Gazofix® supports, affixes bandages, fastens cushioning material and is an especially slip resistant bandage. Skin coloured.

4 m x 4 cm	316 902 000	€€
4 m x 8 cm	316 902 200	€€

Hansaplast® Elastic

Made from flexible and actively breathing material. Reliably protects your wound, especially in the region of the very mobile finger and foot joints. Strongly adhesive. Air permeable.

2 cm x 12 cm, 100 items – for small toes	315 800 200	€€
2 cm x 18 cm, 100 items – extra long – for large toes	315 800 201	€€

Hansaplast® med Soft – Hypoallergenic

Wound covering with antibacterial silver, reduces the risk of infection and is especially skin tolerable. Painlessly removed with its soft fleece; especially suitable for sensitive skin. Air permeable. Skin friendly. Soft and supple.

1 m x 6 cm	315 801 400	€€
------------	-------------	----

Nail edge tamponade

Fleece tamponade for sensitive work in the edge of the nail. When nails are ingrown, tamponading the nail can allow regrowth without discomfort. GEHWOL Fluid effectively supports this measure. Nail edge tamponade protects against sharp edges and protects against friction. Nail edge tamponade - especially soft and supple.

	Order No.	MD
thin 1.4 cm x 10 m, 10 rolls	316 402 300	
thick 1.4 cm x 4 m, 10 rolls	316 402 600	

Octenisept wound gel

Wound gel - for ideal care of acute skin injuries. Optimally provides the wound with moisture and forms a protective layer against bacteria. This protective layer prevents pathogens from entering the wound, since the pathogens are already inactivated in the gel, thereby providing protection against infections and inflammation. Natural wound healing is supported and accelerated in this manner.

20 ml tube	316 902 400	
------------	--------------------	--

Octenisept

Antiseptic for supportive wound care, without iodine. Concentration: Ready to use.

Content: 50 ml	314 265 000	Medicinal product
----------------	--------------------	-------------------

Pedilen N

Cares for, softens and simplifies the removal of cuticles. Protects with its cleansing effect. A product which is proven since many years, with a broad acting spectrum.

20 ml	314 221 600	
-------	--------------------	--

Soft1

Self adhering, pleasant, comfortable, cohesive wound bandage. Adhesive free, highly elastic, skin friendly, air permeable, blood absorbing. Ideal for rapid wound care. Place a small wound cushion made of Soft1 on the bleeding source and affix with Soft1. Does not adhere to the skin, hair or wound. Also adheres in water.

	Order No.	MD
5 m x 6 cm	315 170 900	€€

Star shaped toe tip protection bandage

To protect the tips of the toes, especially in corn removal, hammer toes, rider's toes etc. Allows good fixation of e. g. sterile ointments.

12 items	315 203 800	€€
----------	--------------------	----

Cellulose swabs

Cellulose swabs for wound treatment, ointment bandages and cushioning. The wound friendly fleece material with firm edges can be cut from the roll without lint. Made from highly bleached bandage cellulose with all round gauze covering.

	Order No.	MD
2 rolls, 500 pcs. each	316 131 000	€€
Dispenser for cellulose swabs	316 600 000	

Products for bandage fixation

Clauden® Gauze bandage

Impregnated gauze bandage for wound care. Clauden gauze bandages are impregnated with Clauden powder (protein concentrate), cloquinoxol and paraffinum liquidum. Clauden bandages do not adhere to the wound.

	Order No.	MD
2 cm x 5 m	316 500 300	

Coban active bandage

Self adhesive, elastic bandage without an adhesive layer. This means it is especially skin tolerable. For bandages on the toes and feet.

5.0 cm x 2.3 m, skin coloured	315 204 200	
7.5 cm x 3 m, skin coloured	315 204 300	

Elastomull®

Latex free fixation bandage with high cotton content. Excellent tissue elasticity with high return strength and a wide stretching reserve. Due to the high share of natural fibers, moisture is absorbed well; this largely prevents sweating and itchy skin. Elastomull® is soft and gentle on the skin. Highly elastic. Especially skin tolerable. Pleasant wearing properties.

4.0 m x 4.0 cm	316 800 100	
4.0 m x 6.0 cm	316 800 200	CE

Elastomull® haft

Self adhering, elastic fixation bandage. The elastic cohesive bandage is coated with natural rubber latex. This means that the individual wrap layers adhere to each other especially securely. This results in an excellent, wrinkle-free fit. Mobility is preserved. Elastomull® haft adheres only to itself - not to the skin, hair or clothing. For fixing wound coverings in place, particularly in very mobile and conical body regions as well as joints. Self adhering. Highly elastic. Wide stretching reserve.

4.0 m x 4.0 cm	316 800 400	CE
4.0 m x 6.0 cm	316 800 500	CE

Fixomull® transparent

As a full-faced bandage fixation, it is waterproof and provides protection against pathogens. Use Fixomull® transparent to cover wound coverings and bandages so securely that the patient can shower with the bandage and even go swimming. The material allows the skin to breathe. The transparent wound fixation allows constant viewing of the wound environment.

	Order No.	MD
10 m x 5 cm	316 901 400	€

Geka® bandages

For fixing wound coverings in place.

4 m x 4 cm	316 200 400	€
4 m x 6 cm	316 200 600	€

Leukomed® - Sterile wound bandages

Leukomed® is made from viscose fleece and is especially soft, supple, skin friendly and absorbent. It covers the wound all round. Leukomed® does not adhere to the wound. The bandages are in individual sterile packages. Ideal for wound care in abrasions and cut wounds.

7.2 x 5 cm 5 items	315 802 100	€
8.0 x 10 cm 5 items	315 802 200	€

Leukomed® T plus

transparent, waterproof, sterile wound bandage

Leukomed® T plus is water and pathogen tight, but water vapour and oxygen permeable. Reduces the risk of macerations. Wound covering made from absorbent viscose fleece; a special coating prevents wound adhesion. Carrier foil with grip bar for safe and precise fixation. Adhesive mass: skin friendly polyacrylate.

7.2 x 5 cm 5 items	315 802 300	€
--------------------	--------------------	---

Leukoderm®

Leukoderm® is a semitransparent fixation bandage with polyacrylate adhesive mass and an extra layer of cotton. It is covered with a very thin perforated polyethylene foil. Always recommended when the fixation must adhere securely, but be especially skin tolerable. Skin friendly. For especially sensitive skin. Can be torn by hand. Painless and removeable without residue. Rejects water. High air and water vapour permeability. Adjusts to the body well, including contoured body regions. Rejects water.

	Order No.	MD
5.0 m x 1.25 cm	315 800 800	CE
5.0 m x 2.50 cm	315 800 900	CE

Leukoflex®

Transparent, supple fixation bandage with polyacrylate adhesive mass. The carrier consists of a thin, stretchy polyethylene foil. Latex free. Good immediate and long term adhesion. Skin friendly. Tight to the inside and outside. Stretches. Water resistant. Adjusts well to the body. Painless and removeable without residue.

5.0 m x 2.50 cm	315 800 600	CE
-----------------	-------------	----

Leukoplast®

Recommended when the fixation must adhere especially securely. Skin coloured fixation bandage with zinc oxide rubber resin adhesive. The carrier is made from viscose, which has a water rejecting surface. Adheres firmly and securely even with high load. Extraordinarily traction resistant. Rejects water.

5.0 m x 2.50 cm	315 802 500	CE
-----------------	-------------	----

Leukoplast® water resistant

Leukoplast® water resistant is a white fixation bandage with zinc oxide rubber resin adhesive. The carrier is made from viscose and has a waterproof impregnation. For normally sensitive skin. High immediate and long term adhesion. Extraordinarily traction resistant.

5.0 m x 2.50 cm	315 802 600	CE
-----------------	-------------	----

Leukosilk®

White fixation bandage with polyacrylate adhesive mass. The carrier is made from cellulose acetate and is tear resistant. For sensitive skin. Skin friendly. Painless and removeable without residue. Easily torn by hand.

5.0 m x 1.25 cm	315 801 000	CE
5.0 m x 2.50 cm	315 801 100	CE

Optiplaste®-C

Longitudinally elastic compression bandage.

	Order No.	MD
6 cm x 2.5 m	315 210 100	CE

Omnitape

Strongly adhering adhesive bandage made from 100% viscose material. Extraordinarily traction resistant and unelastic for precise, long term fixation. Strong adhesion, even on textile surfaces.

2 cm x 10 m	316 902 300	
-------------	-------------	--

Peha-haft®

Cohesive, elastic fixation bandages with double adhesion effect due to a crinkled tissue structure and micropoint latex impregnation; stretching ability approx. 85%; low material consumption due to strong own adhesion - only a few turns already result in secure long term fixation; no adhesion to skin, hair or eyes; air permeable and skin friendly. 46% viscose, 36% cotton, 18% polyamide.

4 m x 6 cm, 1 item	316 901 500	CE
4 m x 2.5 cm, 8 items	316 800 800	CE

tg® tube bandage

Practical and time saving (tube) bandage technique. Seamlessly knit material for affixing compresses. The tightly meshed and especially skin friendly tg tube can be widened to about four times its size by stretching and immediately narrowed again by pulling in the lengthwise direction. Especially skin tolerable. Economical use. Can be sterilised as needed (A 121°C).

For fingers/toes: Size 1 (1.4 cm); 5 m	316 901 600	CE
For fingers/toes: Size 2 (2.3 cm); 5 m	316 901 700	CE

Other products

Applicator no. 0

The tube bandage is easily and simply applied with the applicator.

Correction Ring G

The correction ring is a development which has a variety of uses, e.g. as pressure relief for corns on the toes.

Correction Rings G	315 250 100	12	€
---------------------------	-------------	----	---

Size: normal

Toe Divider G D

New - slimmer separating bars for better wearing comfort.
Soft polymer gel cushion with a shape that fits comfortably between the toes.

Toe Dividers G D			
small	315 252 800	15	€
medium	315 252 900	15	€
large	315 253 000	15	€

Sizes: small, medium, large

Toe Separator G

Supple and nonslip relief for problems between the toes.
With especially pronounced side edges.

Toe Separators G			
small	315 251 200	4	€
medium	315 251 300	4	€
large	315 251 400	4	€

Sizes: small, medium, large

Sizes: normal right/left

Cushion for Hammer Toe G

The hammer toe cushion with wide, elastic tube sits securely without cutting in.

Order No. PU MD

Cushions for Hammer Toe G

right	315 251 500	2	€
left	315 251 600	2	€

Size: normal

Corn Protection Ring G

Especially adaptive, soft and ideally protecting corn protection cushion. This ring provides three-dimensional padding on and around the painful corn, providing relief from pressure.

Corn Protection Rings G

small	315 252 200	12	€
medium	315 252 300	12	€

Sizes: mini, small, medium

Toe Cap G

The cap covers the toe. Soft cushioning for irritated painful sites on the ends and sides of the toes. Stops toes rubbing against each other.

Toe Caps G

mini	315 253 500	6	€
small	315 250 300	6	€
medium	315 250 200	6	€

Sizes:
small, large

Metatarsal Cushion G

The soft gel with thicker cushioning in the middle relieves pain and "burning" under the sole of the foot. It reduces the formation of hard skin.

Metatarsal Cushions G small	315 250 400	1 pair	€
Metatarsal Cushions G large	315 252 100	1 pair	€

Heel Cushion G

Highly elastic and especially soft shock absorbing heel cushion for pleasant pressure relief with heel spur. New gel waves provide pressure relief precisely in the affected areas of the foot and avoid extreme strain during walking and standing. The gel waves result in a gentle, flowing transition from the harder material to the softer material of the heel cushion. Heel cushions relieve strain on the knees, talocalcanean and hip joints as well as the spinal column.

Order No. PU MD

Heel Cushions G

small	315 253 300	1 pair	€
medium	315 253 300	1 pair	€
large	315 253 700	1 pair	€

Sizes: small, medium

Bunion Cushion G

The soft cup affords unique protection and comfort. It is worn under the stocking.

Bunion Cushions G 315 250 000 2 €

Size: normal

Small Toe Pad Cushion G

The soft, highly elastic cushion simplifies walking with painful balls of the small toes, e.g. when narrow shoes are worn. It provides protection and comfort. It is worn under the stocking.

Small Toe Pad Cushions G 315 253 600 2 €

Size: normal

Assortment box of polymer gel items

Besides pure polymer gel shapes, textile-coated polymer gel pressure protectors are also used with extremely elastic, soft fabric in combination with polymer gel.

The flesh-coloured fabric allows the product to be worn as normal, even with sandals. The polymer gel works directly on the spot where it is applied. The textile fabric holds it in place.

Trust requires highest quality

Quality in stainless steel

Hand instruments for foot care must satisfy high quality requirements. Only high quality materials, first class craftsmanship and well thought out design guarantee safety and comfort in use.

And: an instrument becomes cost effective and financially viable for the practice if it has a long life and its properties for use remain consistent.

Only instruments made of stainless steel fulfil these basic requirements of the guidelines for medical devices. In contrast to nickel coated instruments, they are entitled to carry the CE symbol and are approved as medical devices. With these tested and certified instruments, medical foot care specialists are justified in claiming full compliance with their duty of care regarding hygiene.

Tested for safety

In order to meet the high requirements and expectations of the user in all areas, the AESCULAP quality requirements are also exceptionally high.

From the onset the company has therefore devised its own quality standard, which stringently restricts the permitted DIN/ISO standard tolerances in every respect. This is already noticeable in the selection and testing of the materials and continues throughout the entire production process.

The instrument manufacturing technology based on the symbiosis of high tech and craftsmanship as well as vertical range of production provides compliance with standards and the greatest precision with consistent quality.

At AESCULAP they have known for more than 130 years that there is no alternative to high quality. High quality is always more economical than high quality.

“The memory of poor quality lasts longer than the brief pleasure of the low price.”

JULIAN RUSSELL

That is how quality is recognised – after long-term use:

- The handles lie comfortably in the hand.
- Scissors and clippers glide smoothly and evenly up and down as the handle is moved.
- Joints are finished so that one half of an instrument fits into the other as it crosses and is then forged again. There is no unnecessary play of movement in the closing area.
- The cutting edges of forceps meet precisely right up to the tip.
- There are no gaps in the scissors between the sharp cutting edges.
- All surfaces are smooth and free of rust or discolouration – even joints, cutting and rubbing surfaces.

...ained a critical eye of the AESCULAP employee sees the precision and quality of an instrument in its entirety. Only with the sensitivity of his hands does he feel the elasticity and tension, the smoothness of the run or the soft snapping into place.

AESCULAP®

It is only with the know-how, experience and care of AESCULAP's surgical mechanics that reproducible AESCULAP quality can be guaranteed over decades. Knowledge which is responsibly passed on.

Photo of detail:
Fastening point of an
AESCULAP corner clipper

A look at the manufacturing process

Depending on the model, an instrument needs 50 or more manufacturing steps, and approximately two thirds are carried out by hand. Instruments are forged using resistance of up to 100 tons. This is followed by punching out, heat treatment, sawing and milling processes. Hardening at over 1,000°C sets the required strength of the instrument – for example, tweezers must be more flexible than scissors. At the same time, homogenous hardness provides an even distribution of the chrome components and corrosion resistance from the surface to the core.

Polishing evens out the surface and the corrosion-resistant chrome oxide protection layer (passive layer) is fully activated. Instruments generally have a non-reflective matt finish.

The manufacturing experts (tool mechanics specialists in instrument engineering with three and a half years of training) make a complex tool such as a nail clipper approx. 150 to 180 times before it leaves the production process.

I'll have stainless steel!

With the correct care, high quality AESCULAP instruments are extremely hard-wearing.

- With slight mechanical superficial damage (such as after dropping them) there will not be any corrosion.
- Correctly cared for, the surfaces will remain intact and beautiful for years.
- Formation of rust on cutting surfaces and rust beds at joints and friction surfaces can be avoided in the long term.

Important for hygiene: even when stainless steel instruments are placed in cleaning and disinfectant solutions several times a day, this does not cause "flaking" or other changes to the surface of the material. And: in contrast to rust-forming metals and alloys, stainless steel can be sterilised in an autoclave. This means that the instruments can be safely sterilised and are quickly reusable.

Quality from the start

Our instruments are highly valued by surgeons all over the world. You know why this is the case and will ensure that things remain this way.

Golden rules for instrument care

- Only use suitable disinfectants and cleaning agents to disinfect and clean instruments. Please do not use drill brushes for manual cleaning. We recommend a medium hard toothbrush.
- When cleaning instruments in the ultrasound bath, always ensure that the joints are opened and the joint area of the instruments is cleaned.
- When using ultrasound, take the immersion times and dosage of the cleaning agent into account.
- Prior to sterilisation, rinse the instruments with fully desalinated or distilled water and dry them.
- Regularly spray the joint area of instruments with a special paraffin oil to prevent it from setting in. We recommend AESCULAP Sterilite Oil Spray prior to autoclave sterilisation.
- Absolutely sort out instruments which have rust or other safety-relevant damage.

This avoids costly instrument repairs.

AESCULAP quality is reliable and permanent.
Over 130 years of expertise and care of the instrument
mechanics contribute to this.

Stainless steel instruments in the best craftsmanship quality

Stainless steel instruments

These stainless steel instruments are produced based on many years of experience according to the best Solingen tradition in Germany. These high quality instruments are produced in many work steps on modern machines and the best manual work. Many years of tradition and experienced, well trained employees as well as using high quality steels and materials lay the foundation for fulfilling all medicinal product guideline requirements and being allowed to bear the CE label without restrictions. Constant material tests and strict multiple controls as part of quality assurance guarantee consistent quality. With proper handling and care, these tested and certified instruments will please you for a long time.

In podiatry, specialist careful removal of hard skin and corns on areas of the feet that are especially subject to stress is part of the daily routine.

Use of the right scalpels, blades and handy blade holders makes treatment fast and pain free. Choose from the available models.

Replacement scalpels for the removal of

- corns
- hard skin
- calluses

Removal of corns with a scalpel.

Using light pressure, the scalpel is guided over tautened skin.

Removal of hard skin from the forefoot using a scalpel.

Hollow blades

Many foot problems are particularly effectively and precisely treated with hollow blades. They are held like a pencil and this enables particularly sensitive work on problem sites. The precise edge on the blades makes it possible to perform a deep, clean cut. Hollow blades are easily changed, are individually packed in sterile packaging and correspond to current requirements for the modern foot care practice. Various hollow blades are available for different problems.

Sizes 1-3

For the removal of corns, hard skin in the nail fold and ingrown toenails, as well as soft corns between the toes. For example, the blade is used with a turning movement from left to right or vice versa for removing corns, encircling the core to release it and then lift it out.

Sizes 5-12

For the removal of hard skin on the feet, in the treatment for example of cracked heels, superficial or striated hard skin. This is best treated with blades 5-8. Blades 10 and 12 are suitable for the removal of severe superficial areas of hard skin. Flat areas of hard skin are more easily removed if the skin is first treated with GEHWOL Callus Jelly.

GERLACH offers you a one-hour video or DVD as an introduction and support to your work, and this provides a particularly good explanation of the methods for working with these blades (only in German available).

For corns

Holding the hollow blade like a pen when working supports the user's fine motor function and allows particularly sensitive filigree work.

The middle finger provides support during fine work, such as here at the nail fold, providing a guide during sensitive treatment.

Removal of a corn using a small blade. The core has already been removed.

The surrounding hard skin is comfortably removed using a hollow blade.

With the hollow blade, it is easy to reach the difficult to access problem sites between the toes.

Releasing and removing a corn below the big toe using a hollow blade no: 1 or 2.

After changing the blade, the area is worked on using a no: 3 or 5 hollow blade.

For hard skin

Pressure sites on the second toe are worked on with a wide hollow blade.

Safe use of the instruments when removing hard skin between the toes.

Pressure sites are easily removed from the forefoot.

Training manual and picture atlas for podiatry

Second edition, updated and extended

This new edition should provide a bridge between "traditional medical foot care" in Germany and the recently created professional image of the podiatrist. The focus of the title lies in the practical application of a variety of podiatry techniques based on a wide range of basic podological knowledge. For better understanding of the individual treatment stages and the pathological changes abundantly documented with photographs and explained with diagrams. Foreign words are often explained in modern text and additionally explained in a small dictionary.

The author combines the medical experience of his podiatry practice and his knowledge from the use of a wide variety of brace techniques with his experience as a medical chiroprapist.

Test questions for podiatry

This book provides an overview of education and examination regulations for podiatrists. The questions which are compiled here allow you to deepen and expand knowledge in the field of podiatry. With detailed answers and comments on the individual questions, the book provides a helpful and useful supplement to the "Text-book and image atlas for podiatry".

Extreme cases from podological practice

In the new volume of "Extreme cases from podological practice", the author, Dr. med. Norbert Scholz, has introduced 100 podiatry cases treated with interdisciplinary cooperation between doctor and podiatrist. He understands the concept of "podiatry" in its true meaning as "study of the feet", since podiatry for him is more than just cutting nails and removing hard skin.

The book describes the progress of some extreme cases, which do not appear every day in the podiatry practice, but can occur. Progress is sometimes documented with photographs over several years. It is not possible for most foot experts to observe the progress of their patients diseases and healing progress to the end so closely for such a long period – though some may not have a successful outcome. The book does have this advantage, and it is the only one currently on the market in this form. It is therefore to be recommended for both beginners in medical podiatry and for experienced podiatrists and doctors.

The books and chart are available in German language only.

GTO Nail Brace fixed in place.

GTO nail brace GTO loop

Healing ingrown toenails at affordable conditions. The GTO nail brace makes brace therapy more cost effective. Renowned physicians and podiatrists are convinced of the very high quality brace and the therapy successes which are obtained with it.

Convince with the GTO loop. The use of the GTO loop has many advantages.

The GTO loop is therefore:

- usable for all common three-section brace types on the market;
- independent of the brace segment length;
- due to the arched U shape, the therapist automatically finds the correct traction and leverage point for exerting force on the brace segments on the nail;
- easy orientation of the winding hook - more to the left or right - makes it easy to shift this traction and leverage point;
- extremely tear resistant.

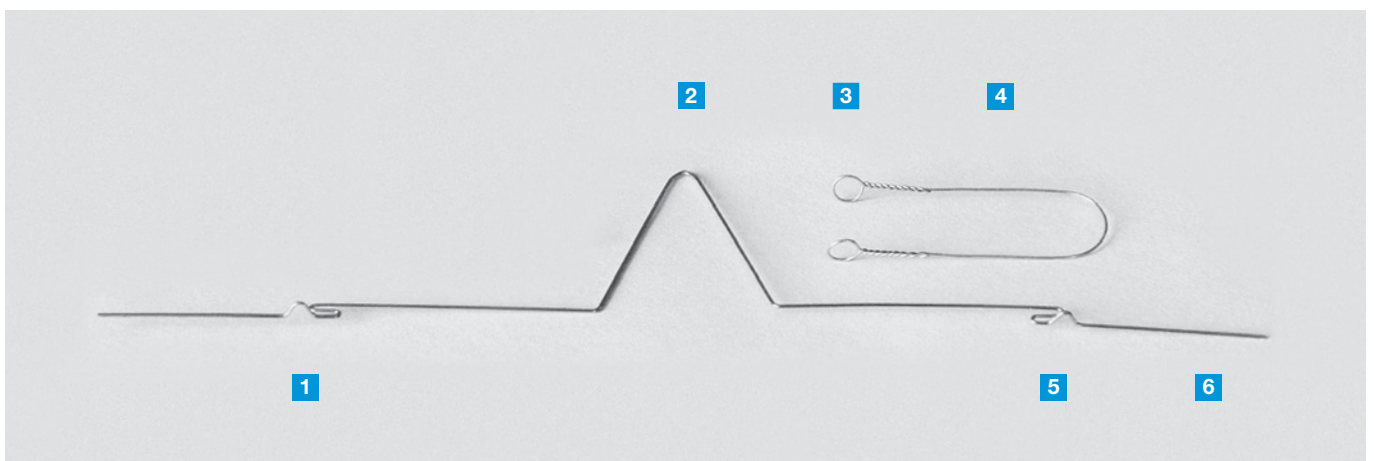

Correct placement and treatment with the three-section brace is eminently important.

All therapists trained to a three-section orthonychia brace can order the "GTO nail brace" without additional training.

GTO Nail Brace

- 1 Omega (vertical here) later lies on the nail and then points to the nail bed
- 2 Protuberance for a better grip
- 3 Eye
- 4 GTO loop
- 5 S bend (behind the Omega) to guide the loop
- 6 Brace end

Nail brace fixed in place with Onycholit.

Nail brace fixed in place. Packing the nail fold and applying medication to granulation tissue.

The VHO Osthold PERFECT brace is medically indicated for the following nail changes:

- Ingrown toenails (unguis incarnatus), e.g. following incorrect nail care or with hallux valgus
- Deformed nails in diabetics to avoid an operation
- Hangnails and ingrowing nails
- With growth disorders of nails e.g. as a result of
 - Psoriasis
 - Chronic polyarthritis
 - Onychogryposis (increased thickening and curvature of the nail) with thickening of the nail bed
- Deformed nail growth following traumatic loss of a nail or due to genetic disposition
- Onychomycosis (fungal infection of the nail) with thickening of the nail plate and uneven nail edges
- Inflammation in the nail fold or bed (paronychia)
- Corns in the nail fold

The VHO-Osthold PERFECT brace principle

In contrast to other brace techniques, the success of the VHO-Osthold brace rests on the interaction of lever and traction. This is the only way the enormous retraction force of the nail can be overcome. It can amount to 10 kg in an adult. While previous braces only use the elastic retraction force of a bent steel wire spring, which tries to take on its original shape again, the power of the VHO-Osthold PERFECT brace comes from the use of the middle loop and the way it shortens the length of the brace. Shortening the length has the effect of changing the shape of the nail, lifting the edges of the nail from the wound area. That means immediate relief of pain and an improved anti-inflammatory, antifungal and anti-bacterial effect.

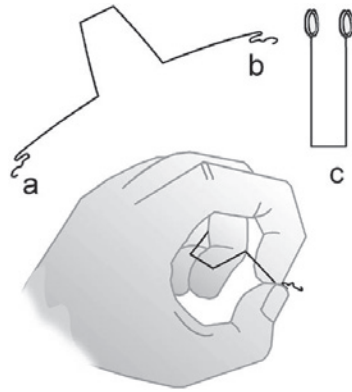

When using the VHO-Osthold method, treatment of even severely inflamed and purulent nail surroundings is almost pain free.

Braces are available:

- in 3 brace sizes – mini, midi, maxi – and a micro-brace for extremely small nails (e.g. children)
- in 9 loop sizes (2-10 mm)
- in wire strengths 0.3, 0.4 and 0.5 mm
- with loops in strengths 0.3 mm for weaker nails and for pre-tensioning and 0.4 mm for stronger nails and follow-up tensioning

Using the VHO Osthold PERFECT brace

Two hooked steel wire springs are attached painlessly to the edges of the nail and pulled together with a loop. This pulls the nail edges out of the inflamed nail fold. There is no need for costly silicon impressions and plaster models, and no need for waiting.

1 The VHO brace consists of 3 parts: a, b and c. a and b are two tiny pre-formed levers on the right and left of a steel wire spring. In the middle is a shape designed to be guided by 3 fingers of the left hand. a and b are then firmly joined to each other on the nail plate by turning the loop, which is then cut off and glued in place.

2 The small lever is fitted precisely to one side of the nail. The wire must be adjusted depending on the strength and curvature of the nail and the hook h is shortened. It is fixed in place using high performance adhesive and cut off.

3 The other side is fitted in the same manner. This is not cut off.

4 The loop is selected by visual judgement and wound round the small protrusions. The eye of the loop should be facing you. The loops are pressed together.

5 The winder is threaded through both eyes and positioned vertically.

6 By turning the winder (clockwise) the three parts of the VHO brace are tightly bound together.

7 All wire parts that stick out are cut off as short as possible.

8 All the sharp points are covered by a thick drop of plastic nail material. If the nails are very curved, the wire parts can be covered with plastic nail after being placed on one side, either to the right or to the left.

Sulci-protectors

Sulci protectors are ideal for straightening, mending and shaping the side edges of the nail and for cushioning the nail against irritation or inflammation from the nail wall. They offer a distinct advantage over packing, especially for ingrown toenails.

They can be left in place for up to eight weeks (must be re-fixed after four weeks). The splints do not just provide a cushion, they also have the effect of maintaining the normal width and shape of the nail at the free edge. That prevents changes to the nail bed, protrusion of the nail wall and the

resulting deformities and growth disorders of the nail.

Sulci protectors are available in three different sizes. Sulci protectors can be positioned using tweezers or a Sulci injector. GEWOHL Nail Repair Gel is the ideal fixative for the protector.

With ingrown toenails, the side edge of the nail often has sharp edges or spikes that press deep into the fold, causing a painful inflammatory reaction.

The edge of the nail is first straightened and smoothed with the help of e.g. a file.

The small splints of soft plastic open lengthwise. They are cut to the correct length and the short edge is smoothed.

After the nail has been disinfected and any grease has been removed, the Sulci protector is pushed over the free side edge of the nail using the tweezers.

The finished Sulci protector.

The visible part of the Sulci lying on the nail plate is fixed in place with GEWOHL Nail Repair Gel.

	Order No.

Onyclip

Comfortable nail correction.

Nail correction system with precise traction, can be used for any shape of nail.

For nails that are ingrown on one or both sides, hypergranulation, partial resection and irritation in the nail fold.

Epoxy-coated sprung stainless steel strips with adhesive gel.

Use a narrow measuring tape to measure the nail.

Cut off the Onyclip strip to the individual length required - two different strengths are available.

Pre-shape the strips. To adjust the traction, bend the Onyclip strips with round-nosed pliers and fit to the shape of the nail. Take the tension into account. Caution: Do not crease the strips.

Apply adhesive. Place a small drop of the adhesive gel included in the Onyclip set on one end of the strip. Wait a few seconds between applying the adhesive and applying the strip.

The traction or pulling power of the sprung stainless steel, plastic-coated strip takes effect immediately the Onyclip brace is fixed in place.

The finished Onyclip brace.

	Order No.	MD
Onyclip packaging with 4 stainless strips each, 0.1 and 0.15 mm thick, 10 cm long, 1 measuring strip, 1 spatula, 2 x 1 g adhesive gel	313 250 600	€
Adhesive gel, 3 x 1 g	313 250 700	€

B/S brace system

The B/S brace is a flat plastic leaf spring. An effective nail correction is possible even with nails with wounds in the nail fold, sensitive edges of the nails and purulent ingrown nails. Fixed to the whole nail surface, the necessary traction is perfectly distributed.

Preparation: Sand down and roughen the nail plate.
Step 1: Apply the adhesive

The brace is applied and pressed firmly for about 10 seconds.

The ready-prepared B/S brace – almost invisible.

B/S special adhesive – one drop is placed on the centre of the nail plate.

The outer end of the brace is pressed onto the nail on the left; the special adhesive must run below the brace as far as the end of the brace. Press for 10 seconds, repeat the same thing on the right.

B/S brace with magnetic applicator

The magnetic applicator ensures even simpler, faster and more secure application of the B/S Classic brace to the nail. The B/S brace was equipped with a magnetic point. The B/S applicator with a magnet. This makes handling even simpler and less complicated. Two different application options can be used.

B/S quick brace

A nail correction system that is especially fast and easy to use. Ideal for beginners. After cleaning the nail, apply the fast adhesive and lay on the nail brace. It only takes 10 seconds for the nail brace to adhere. No instruments necessary.

Continue after performing step 1 (see left side):

Measuring from nail edge to nail edge.

Application of the B/S adhesive to the entire nail.

Application of the brace on the left / right, press on for approx. 7 seconds per side. Equalise the transition zones.

The ready-prepared B/S brace - almost invisible.

Continue after performing step 1 (see right side):

Measuring the required nail brace by pressing on the template.

Apply the B/S adhesive to the whole nail.

Apply and fix. Fix the short part of the brace to the side edge of the nail.

The ready-prepared B/S brace - almost invisible.

Klebefix saBesto

Artificial nail with **GEHWOL** Nail Compound

Strengthening the nail or preparing a protective partial replacement nail is sensible for many nail problems:

- for replacing the parts of the nail removed during treatment of fungal infections of the nail
- after removal of corns beneath the nail
- for broken, torn, sharp-edged or thin nails
- when the nails are too short or are damaged
- as a result of damage to the nail bed

A partial artificial nail made of **GEHWOL** Nail Compound can be produced easily and without a costly plaster model. The elastic, breathable material protects the nail bed from mechanical damage. It also incorporates a disinfectant to prevent inflammation and further fungal infection. **GEHWOL** Nail Compound produces a cosmetically perfect and visually "normal" nail that grows with the natural nail and can be cut, filed, cared for and varnished as required.

Replacing missing nail parts helps to prevent deformities of the nail bed or toenail and stabilise the residual nail. This helps to avoid subsequent damage, such as growth disorders caused by the protruding distal nail wall or hard skin on the nail bed. The nail can grow on unhindered.

Follow-up treatment: To protect the parts of the nail not covered in nail compound from fungal infection, the daily application of **GEHWOL med Protective Nail and Skin Cream** or **Skin Oil** is recommended. Both products have an antimycotic effect, promoting growth and helping to provide healthy, elastic nails.

1 Fungal infection of the nail at an advanced stage of the infection.

2 All loose nail parts and all parts of the nail infected by the fungus should be removed with a burr down to the nail bed.

3 **GEHWOL** Nail Compound should be applied in thin layers allowing a drying time of approximately five minutes between each application.

4 The artificial nail can be strengthened if necessary, depending on the thickness of the nail, by one or two layers of non woven fabric.

5 While the nail replacement is still moist, it can be easily modelled or smoothed using a wet finger or a wet instrument. The result: A visually perfect nail with properties that are "identical to nature".

That is what it is all about: Consistent value

For reasons of hygiene, GERLACH only offers rust-proof burs, grinders and diamond grinders!

Drills, burs and grinders are essential for gentle and effective treatment of hard skin and nails in modern podiatry. Looking after rotating instruments properly prolongs their life and saves the patient pain. Diamond grinders, stainless steel instruments and hard metal burs are especially recommended for correct medical hygiene.

The selection of the size, shape and diameter of a rotating instrument is determined by the point for which the instrument is intended for a specific point, for example. The ability of an instrument to remove material is also important, i.e. the abrasive power. This depends on the rotating speed and the size of the structure or grains on the instrument surface: Rough surfaces and larger angles generally grind more strongly.

Check your speed!

Depending on use, all instruments have a maximum rotating speed, provided by the manufacturer. The bigger the diameter of the grinder, the fewer revolutions per minute are allowed, and the speed of the individual grains on the instrument surface is significantly higher with large grinders. For example: If a grinder with a diameter of 5 mm rotates at 40,000 rpm, the speed of the surface is approximately 38 km/h. If you run a grinder of 20 mm diameter at 40,000 rpm, all the grains would have a speed of approximately 150 km/h.

The speed of the grains on the burr surface increases with large burs.

Such high speeds cause enormous frictional heat, which can cause painful burns for the patient. And: A high number of rotations causes strong centrifugal force and therefore require precisely worked intact instruments with high precision. Rotating instruments should therefore be checked regularly. In this catalogue you will find information on the maximum speed of rotation that must be observed for all the rotating instruments.

Do not work under pressure!

Too much pressure when grinding is unpleasant for the client and can produce heat problems. Strong pressure also puts great stress on the micromotor, the tension device in the hand piece and the burr and grinder. Burs and grinders should therefore be used only with light pressure. A sharp intact instrument moves through the treatment field almost by itself. Toothed (cutting) instruments should only be used in a clockwise direction.

Important: A clean turn!

For burs and screws, rotating instruments should be hygienically prepared before every use, in order to avoid infection with fungi and other microorganisms. Since disinfection, cleaning and to some extent sterilisation (in an autoclave) take place in a moist milieu, the material's resistance to rust and corrosion is extremely important. Moisture quickly leads to the formation of rust, especially with ordinary steel with fine teeth and corners.

For a technically impeccable medical foot care, all of GERLACH's rotating metal instruments conform to CE specifications for rust-free performance of stainless steel and hard metal. Just like diamond grinders with a stainless steel shaft, these instruments have high corrosion resistance so that they are easier to look after, can be used for longer and therefore be more cost-effective.

Care instructions

If you are using rotating instruments made of normal steel in your practice, watch out for the following:

To prevent the transfer of rust particles to intact instruments, normal steel instruments should always be prepared separately from stainless steel instruments.

- Use disinfectants with corrosion protection!
- Before sterilisation, make sure steel instruments have been properly dried, especially in between the fine teeth.
- Allow instruments to cool in the steriliser after sterilisation!
- Steel instruments should be stored in a dry place and kept at a constant temperature.
- A sterilisable rust protection spray will protect instruments from rust during and after sterilisation in an autoclave.

Diamond grinders

Diamond grinders are the perfect tools for removing hard skin and nails – both for suction and spray techniques. The diamond dust is evenly distributed on both tip and edges so that the grinder runs with low vibrations and is pleasant for the patient. The danger of injury is therefore very slight, although they are more abrasive than other grinders.

The precision-engineered shape and stability with precisely rotating shafts of stainless steel mean the diamond grinders rotate with a high degree of accuracy. They are therefore particularly suitable for use in hand pieces with high revolutions.

Choose from a wide range of different use specific shapes and grain sizes from the finest to the roughest work. Crystals of natural diamond are galvanically applied on a metal fast in a metal grip. Both variations work very effectively, though natural diamonds have more grinding power since the surfaces of the crystals of the same size grain are irregular.

Diamond grinders are especially good value alternative to carbide or ceramic grinders because they last for such a long time. As they are corrosion resistant they are suitable for the usual sterilisation and cleaning procedures used in dent care.

Diamond grinders: The surfaces of industrial diamonds are more regular. Therefore a somewhat coarser graining is selected (SEM image).

Diamond grinders with natural diamonds: The irregular surface of the crystal has an enormous grinding power (SEM image).

Hard metal burrs

The hard metal burrs are extremely hard and rust free. They have a low wear and are particularly easy to use. Working with them results in low vibrations. Thanks to the precise engineering, durable sharp edge, compact design, guided cutting and high precision burr.

Ceramic grinders

Ceramic grinders consist of selected high grade corundum bound with ceramics to a rustproof shaft. They are suitable for filing nails and hard skin as well as for anything.

In contrast to the steel and the diamond grinders, ceramic grinders can be cleaned in an alkaline drill bath, as the burrs will then dissolve. Cleaning can be carried out using a brass wire brush, although it is better in an ultrasound cleaning bath.

Industrial diamonds in a diamond grinder: The ground binding is particularly durable and contains a large part of the crystal.

Capped grinders

Grinder caps of different grain size can be applied to the rubber cap shafts of various diameters. They are suitable for filing off hard skin, although they can only be used dry with a suction technique.

It is not possible to work at high revolutions with grinder caps of 13 or 16 mm diameter. As they cannot be disinfected or sterilised, grinder caps can only be used once.

GERLACH drip cap for spray hand piece

Contaminated spray water running down the burr and burr shaft can contaminate the interior of hand piece, possibly resulting in malfunction.

The drip cap provides effective protection against contamination and prevents dirt particles from penetrating the hand piece. This has a positive effect on the life span of the hand piece.

The drip cap can be assembled quickly and easily using the new burr measuring gauge.

A drip cap is inserted in the relevant contour of the burr measuring gauge; the burr is inserted and pushed into the burr measuring gauge until it clicks into position. This positions the drip cap at the correct distance from the tip of the hand piece.

The cap can also be left in position when cleaning the burr in autoclaves, hot air sterilisers or an ultrasound bath. Re-positioning may be required after treatment in an ultrasound bath.

Use the gauge, which is precisely the right length, to ensure the accurate positioning of the drip cap.

The drip cap protects the interior of the hand piece from contaminated liquid.

GERLACH dust protection O ring for suction hand piece

The dust protection ring reduces the penetration of dirt particles considerably and prevents dirt from entering the inner bearings. Dirty bearings lead to loss of function.

The dust protection ring provides effective protection against dirt and contributes to extending the service life of the hand piece.

The dust protection ring can be left on the grinder shaft when cleaning, sterilising in the autoclave etc..

It may be necessary to adjust its position.

Position the dust protection ring approx. 5 mm from the lower end of the grinder shaft. Push the grinder with the dust protection O ring into the hand piece to the stop.

The dust protection ring must lie completely against the rotating cap of the hand piece.

Burr measuring gauge

For simple, fast and problem-free checking of the rotary accuracy of your burs and cutters.

Steri-Block-Maxi

The Steri-Block-Maxi is the ideal stand for your burr range. It does not matter whether you have the basic range or a special set, either for diabetics or nails. The Steri-Block-Maxi keeps all your instruments together so that they can be viewed at a glance.

At the next treatment, simply open up this stable burr stand and all your rotating instruments can be clearly seen and will be ready to hand. Just the way you are used to. There is no easier or faster way.

The stand is also practicable to use for cleaning and disinfection of your selection of burs – just fold it up and place it in your ultrasound bath for thorough cleaning.

When you close it, make sure you have securely fastened the safety catch so that the burs do not fall out.

The Steri-Block-Maxi is also suitable for use in a hot air device or an autoclave. The specifically rounded corners prevent punching through the sterilisation bags.

In combination with the instrument box, the stand is ideal for disinfecting and cleaning burs used on home visits.

The box closes tightly and fits precisely into the specially designed compartment in all GERLACH foot care cases so that nothing falls out during transport.

It is only necessary to fill the instrument box half full with disinfectant and cleaning solution, as the burs are placed in such a way that they slide into a head-down position when the case is carried and are rinsed by the fluid. The burs are then easy to remove for treatment, as the fluid collects at the base of the box.

With its 27 pockets the Steri-Block-Maxi together with the instrument box provides good dust-free storage for your most important burs, ready to hand.

Burr stands

In podiatry, you handle a variety of situations and problems to do with the feet, many of which need to be treated with a wide range of burs. You can select these tools from our comprehensive range.

Based on our vast experience we have put together the following burr sets to make things easier for you:

Starter set

This selection of burs enables the treatment of all the common foot problems, such as corns and hard skin, and problems with the nail and in the nail fold.

Podiatry set

This is a specialist collection of professional instruments for the special applications that occur with the skin or the nails in podiatry.

Hard skin set

Thick skin on the feet is often hard, but it can be easily worked on even in the nail fold using these burrs and grinders.

Nail set

The tools shown are especially suitable for all kinds of work on thickened, deformed nails, for smoothing and polishing, and for use in the nail fold.

Diabetic set

These instruments are especially suitable for safe working on diabetic feet. Both the shapes for removing and smoothing hard skin and the shape for working in the nail fold are safely rounded and the grain is adjusted to the particular skin composition. Nail polishing and work on even very sensitive skin is possible, thanks to the extra fine grain.

Corn burr set

Special burrs are needed for different types of corn in different positions, so that they can be cleanly and completely removed. Small burr heads allow work into deeper areas in order to remove the root.

Nail repair set

For rapid preparation of the nail, for removing loose, infected, thickened nail parts and treating the finished artificial nail.

Hard metal for grinding the nail plate. Diamond grinders for straightening and cleaning the nail fold. Polisher for final finishing treatment.

Order No.

All diamond grinders, drills, burrs, polishers and cutters are **rust-proof**, hygienic, durable, economical!

Diamond grinder

For working on hard skin, corns and nails. Particularly durable.

Diamond grinder last at least five times as long as steel burrs, depending on use.

The diamonds immediately remove hard skin and nail parts with less danger of injury.

Especially designed for high speed hand pieces and spray technology.

Cleaning the nail side with D 407H/010 medium

Working on the nail side with D 407LH/010 medium

Hard metal burr

For working on nails and hard skin.

Recommendation:

To obtain the best work results, use hard metal grinders at min. 16,000 to 18,000 rpm.

Smaller grinders, e. g. the HM 296 GX 040 medium: min. 25,000 rpm. If possible, use higher speeds of 40,000 rpm.

Callus removal on the heel with HM 251 SX 060

“Premier” diamond grinders

Natural raw diamond crystals in especially stable, non-detachable metal binding on one-piece hardened stainless steel shaft.

The diamond crystals are thickly and evenly distributed on the tips and edges.

Grain: medium, large grain and extra large grain.

If the rough diamond crystals are properly arranged, patient treatment is more pleasant, as there is less shaking and vibration.

Economical, as it is almost indestructible.

Treatment with Premier 150/070 medium

Holed diamond grinders

Shown in the popular cap shape. Holed version for better spray distribution.

Burrs with coarse or super coarse grain are especially suitable for removing thickened nails or hard skin.

- These items are particularly popular.

Illustrated in original size.

Shaft lengths may deviate.

Fig. large grain

Capped grinder

for removing hard skin

Fast change of cap.

GERLACH offers you exclusive rubber cap carrier with specially hardened and magnetised stainless steel shafts. These cap carriers are easily cleaned and disinfected in an ultrasound bath.

4 different grain sizes are available:

- fine/grain 320 to smooth the skin
- medium/grain 150 for the removal of fine callus that is not so coarse
- coarse/grain 80 for the removal of coarser callus
- super coarse/grain 60 for the removal of extremely coarse callus

Blue grinder caps

Manufacture of the new grinder caps is carried out in several stages, during which the grinder caps are loaded once and fired twice.

A watertight binding "sticks" the grinding particles of synthetic high grade corundum to the tissue carrier, which is then stabilised by the first firing process.

In the next process, a coloured coating of high quality, specially filled phenol resin is applied, which fills the spaces between the grinding particles and after a second firing process leads to an extremely hard wearing surface for the grinding cap.

This "multibond" procedure produces extremely high quality and visually appealing grinder caps for optimum removal of hard skin.

It provides more precise accuracy of revolutions, which in turn helps to protect your valuable hand piece from damage.

Only coarse caps are illustrated.

Illustrated in original size.

Important information

13 and 15 mm diameter grinder caps are **not suitable for use with fast-revving hand grinders.**

Effective Coarse

Hygienic, effective and cost-effective - single use instruments have developed into a true, economical alternative in rotary instruments. The new polisher caps from Lukas in the new cylindrical format, which are solely available from GERLACH TECHNIK, prove themselves as even more effective instruments for the practice.

The Lukas polisher caps are cylindrically formed and especially suitable for rapid, large-scale removal of excess callus. Smoothing rough areas is also no problem with the single use instruments. As usual, the new polishers in the cylindrical format of GERLACH TECHNIK are made from robust grinding material and are made precisely for sole use on the corresponding polisher cap carriers.

The new caps are available in the grain sizes of 80 coarse and 60 super coarse. With the coarse and super coarse grain, the polishers have a very high polishing performance, making it possible to remove even extremely thick and brittle callus without problems. The cost-effective alternative in rotary instruments guarantees the required flexible use.

Good handling

This is also shown by initial experiences of foot specialists in using polisher caps, which have resulted in positive feedback. Among other things, they place emphasis on good handling. The cylindrical form of the new polisher caps provides a larger polishing surface with

The planar work surface of the cylindrical format is much larger compared to dome shaped cap grinders. Work is faster on large skin areas.

which one can work on the client's foot. This increases polishing efficiency, especially since the new caps are also available in an extended variant (22 mm). At a length of 22 millimeters and a diameter of 10 millimeters, the cylindrical format offers 100 percent more planar work surface than a classic dome format with a length of 15 millimeters and the same diameter (see graphic). The new shape also significantly determines the possible uses. The cylindrical form makes it just as easy to work on large callus areas as on problem points. The offered diameter of ten millimeters is also ideal for gentle use of the foot care unit.

Optimised rotation

The larger work surface of the grinders influences the rotation speeds. When the area is larger and rotation speeds are higher, this increases the grinder's speed on the skin. Friction and abrasion are correspondingly high. The instruments therefore have high efficiency even at lower rotation speeds. The maximum rotation speed (20,000 rpm) should not be exceeded.

Variable use: Large callus areas can be rapidly and effectively treated using the planar work surface (Fig. 1). The slightly flattened edge of the cylindrical format is very suited to point work, e.g. on the tips of the toes (Fig. 2).

Precise work ...

The high quality of the caps, whose grinding particles are made from mineral corundum, is due to their professional manufacturing process. It takes place in several work steps - the so called multibond process.

The caps are first impregnated and then fired twice. A water resistant base binding agent affixes the grinding particles of the synthetically produced corundum on the fabric carrier material. This is then stabilised with the first firing process.

... for economical performance

A coloured cover binding made from special, high quality phenol resin fills the gaps between the grinding particles and leads to an extremely stressable polisher cap surface after the second firing process.

This results in very high quality, optically attractive polisher caps. They also have very high rotational precision, additionally protecting the valuable hand piece against damage.

Attention: Work gloves were omitted for better image appearance. Protective gloves must always be worn during everyday work.

What our users say:

"The cylindrical shape means faster, more effective work. The risk of injury is also minimised."

"Handling is very good with both grain 60 and grain 80."

"With a diameter of 10 mm, the cap polishers are also easy on the hand piece."

"The work area is definitely increased by the shape."

"The cylindrical form is very well suited to removing and smoothing callus - also on the tips of the toes."

"It's especially positive that one can also work on difficult areas, e.g. the side of the nail."

Loyalty is not a matter of jumping from one thing to another.

Since generations, the GEHWOL name has stood for professional foot care. Consequently GEHWOL has only been available, for more than 140 years, where customers expect and receive professional advice: At the specialised Trade. Know-how from manufacturers, know-how from the salesperson and the right solution for treating every problem yourself. GEHWOL is loyal to specialised trade. And not just since yesterday.

Everything for the well-being of the feet.

Feet as soft as velvet. I must treat myself to this.

With the innovative combination of active ingredients

Hyaluron, honey extract and milk extract

GEHWOL FUSSKRAFT Soft Feet is the start of a new care series for everyone who desires healthy feet with beautiful, silky skin and, at the same time, appreciates the feel-good factor of relaxing, pleasantly fragrant foot care. The new cream contains a special, deeply penetrating hyaluron which, together with vitamin-rich avocado oil, supports skin regeneration and strengthens the skin's own immune system. Together with urea, hyaluron also binds moisture in deeper layers and protects against callus formation. Soft milk peptides and honey extract make the skin noticeably silkier and visibly smoother. The modern fragrance is refreshing and conveys the good and secure feeling that your feet are optimally cared for.

Everything for the well-being of the feet.

The foot care product range in professional quality

Feet require care on a daily basis – also after treatment in a practice. Recommend GEHWOL FUSSKRAFT preparations, as they have been developed by professionals for professionals and successfully support you in doing an effective job.

For over 50 years, the highly efficient GEHWOL FUSSKRAFT preparations have been reserved for the specialist recommendation and dispensing by foot specialists. Thus, to the patients' advantage, the entire treatment and foot care comes from you as a professional source. Take advantage of this opportunity to optimally care for your customers. Recommend GEHWOL FUSSKRAFT preparations.

GERLACH gladly offers you counselling with all its experience as a company specialised on foot care since more than 140 years.

 **GEHWOL®**

Everything for the well-being of the feet.

GEHWOL® Trade fairs

We would be happy to see
our national and international
customers at our exhibition booth.

Everything for the well-being of the feet.
